LNS	Lora Network Server
LoRa	Long Range
RAN	Radio Access Network
REST	REpresentational State Transfer
RNC	Radio Network Controller
UTC	Universal Time Coordinated

1. Introduction

This document presents the OSS (Operational Support System) interface of the Kerlink RAN (Radio Access Network) platform.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2. OSS REST API

2.1 Introduction

OSS stands for **O**peration **S**upport **S**ystem. It provides all the REST web services which allow you to manage the IOT platform.

The OSS web services are divided into four main functionals domains :

- The Base Station Controller **BSC**
- The LoRa Network Station **LNS**
- The Radio Network Controller **RNC**
- The Location Based Service **LBS**

BSC manages the fleets of equipments which belongs to customers. It also allows you to manage the users and their roles.

LNS provides the web services which concern the endpoints and clusters.

RNC contains all the web services which concern the radio aspects.

LBS contains the web services which concern the localization of endpoints.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential

2.2 REST architecture

REST is an architecture style which relies on a stateless, client-server, cacheable communications protocol. REST stands for REpresentational State Transfer. RESTful is also used. It refers to web services implementing such an architecture.

Restful web services are Platform-independent, Language-independent, and Standards-based. They runs on top of **HTTP**.

A Restful Web services architecture follows basic design principles:

- It exposes a tree of resources via URI
- It is stateless. Each request from any client contains all the information necessary to service the request, and session state is held in the client.
- A resource is represented by an hypermedia type, for example JSON
- It uses HTTP methods explicitly (GET, POST, PUT, DELETE, ...) and other HTTP standards
- hypertext links to reference state
- hypertext links to reference-related resources

A GET request provides the content of the object pointed by the URI.

A PUT/POST request updates or creates the object pointed by the URI using provided parameters.

The request body is intended to be in JSON format.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.3 Overview

Let examine the following uri :

GET http://kerlink.fr/oss/application/customers/198/fleets?page=3&PageSize=40

This web service allows to get the page number 3 of the list of fleets of the customer 198.

Verb	Protocol		Domain	Path	Query string
GET	http	://	kerlink.fr	/oss/application/customers/198/fleets	?page=3&PageSize=40

The list of possible verbs is : GET, POST, PUT, DELETE, PATCH

POST	creates a new resource
GET	gets a resource
PUT	updates an existing resource
DELETE	deletes a resource
PATCH	updates a subset of fields of an existing resource

2.3.1 DTO

A Data Transfer Object is used to send data to the clients or to receive data from the client.
 A DTO is composed of fields. The supported representation is JSON.

2.4 General rules

Let's consider the following web service URI :

http://kerlink.fr/oss/application/customers/198/fleets?page=3&PageSize=40

The part of the URI in blue contains path parameters.

The query string contains the query parameters. First parameter is preceded by a ?, and others by a &.

- Some web services use a date field. Each date field value is a **timestamp** which is the difference, **measured in milliseconds**, between the current time and midnight January 1, 1970 UTC.
- Both correct an error response bodies are in JSON format.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
Strict confidential	Page 21 / 349	

2.4.1 Encoding the parameters of the URL

The URL parameters can contain special characters which are reserved keys, so the client must encode the URL parameters before sending it to the server.

An example of site which encode the URL : <https://www.urlencoder.org>

Example : getCustomers with a search condition in JSON

Non encoded URL

```
http://host:8080/oss/rest/application/customers?page=1&pageSize=200&search={"o
perand":"name","operation":"eq","values":["foo"]}
```

Encoded URL

```
http://host:8080/oss/rest/application/customers?page=1&pageSize=200&search=%7
B%22operand%22%3A%22name%22%2C%22operation%22%3A%22eq%22%2C%22
values%22%3A%5B%22foo%22%5D%7D
```

2.4.2 Naming and case

The fields, method names, paths and objects are written using the camelCase convention:

Field : roleType (first letter in lowercase)

Path : InsEquipment (first letter in lowercase)

Method name : getLoraStation (first letter in lowercase)

Object, DTO: CustomerDto (first letter in uppercase)

When an acronym appears in the name (like for example XML), not all the acronym is upper case but just the first letter like getXmlFile instead of getXMLFile because you may encounter ambiguous cases like these: XMLFile which should be xMLFile

2.4.1 CSV files

When a CSV file is proposed as a request parameter, the following rules must be applied :

- The charset is UTF-8
- The first row is used to define the columns
- The separator is a comma ','

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

- Each row ends with a line break
- No empty row is authorized
- A null value can be set with the string '**NULL**'

Example :

```
id,firstName,LastName,phone
1,John,Doe,123
2,Paul,Deters,456
3,Peter,Brown,NULL
```

2.5 HTTP status

Five families are defined for the HTTP response status codes :

2xx	Success
3xx	Redirection
4xx	Client side errors
5xx	Server side error

2.6 Response body

Almost every web services will return DTO object in JSON representation.
 A DTO stands for **Data Transfer Object**. All the DTO are defined in the Annex A.

Some web services return simple strings.

2.7 Case sensitive

The strings used for both path parameters and query parameters are case sensitive.
 For example /fleets/Stations is not equivalent to fleets/stations, and
 fleets/stations?fields=name is different from fleets/stations?fields=Name

The DTO field name are also case sensitive. For example, a JSON body dto {"name":"fleet1"} is different from {"Name":"fleet1"}
 The DTO are defined in the Annex A.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	Page 23 / 349

2.8 Navigation

One of the main principle of a REST architecture is to start from an entry endpoint and to navigate from a resource to another, as you would do with a browser. This concept is called **HATEOAS** (Hypermedia as the Engine of Application State)

To do so, the response contains links which give to the client the absolute URIs to go discover the next resources or the embedded resources.

A link contains two fields:

- href : absolute or relative URI of the resource
- rel : the goal of the resource.

Examples

rel='next' allows the client to reach the next page of paginated resources.

rel='last' allows the client to reach the last page of paginated resources.

2.8.1 Base URL

The base URL is the prefix path that is located just after the host:port section.

The value can be modified in the application.properties file via the server.servletPath property.

2.8.2 Entry web service

The OSS web services tree has a unique entry point.

It is called `getApplication` and URI is `GET /application`

This web service returns an `ApplicationDto` which contains the links to its children endpoints.

2.9 Request parameters

Request parameters are the parameters that follow the path in the URI. The first parameters start by a `?` and the others start with `&`.

Available parameters depend on the web service that is called.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
Strict confidential	Page 24 / 349	

2.9.1 Fields parameter

The `fields` request parameter allows to define the list of DTO fields that will be displayed in the response body. When omitted, all the fields are displayed.

Syntax

`fields=<@><!>field1, <@><!>field2, ... <@><!>fieldn`

The '`@`' character is used to define a group. A group is a set of fields.

The '`!`' character is used to exclude a field or a group.

Examples

<code>fields = id, name</code>	➤ displays id and name
<code>fields = @time</code>	➤ displays day,time (group time contains day and time)
<code>fields = name,@time</code>	➤ displays name,day,time
<code>fields = !id</code>	➤ all fields but id
<code>fields = !id,!name</code>	➤ all fields but id and name
<code>fields = !id,!@time</code>	➤ all fields but id and group time

Note

Mix can be used, although it does not make sense to do so

`fields = id,!name` ➤ displays id and hide name

2.10 Asynchronous web services

Web services are most of time synchronous : the user sends a request and he receives the answer in a synchronous mode.

Two use cases need to use a different way because :

- The task may take a long time to be processed (for example a spectrum with a long duration)
- The task needs to be launched within another process (new thread)

The sequence diagram for those use cases is the following :

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

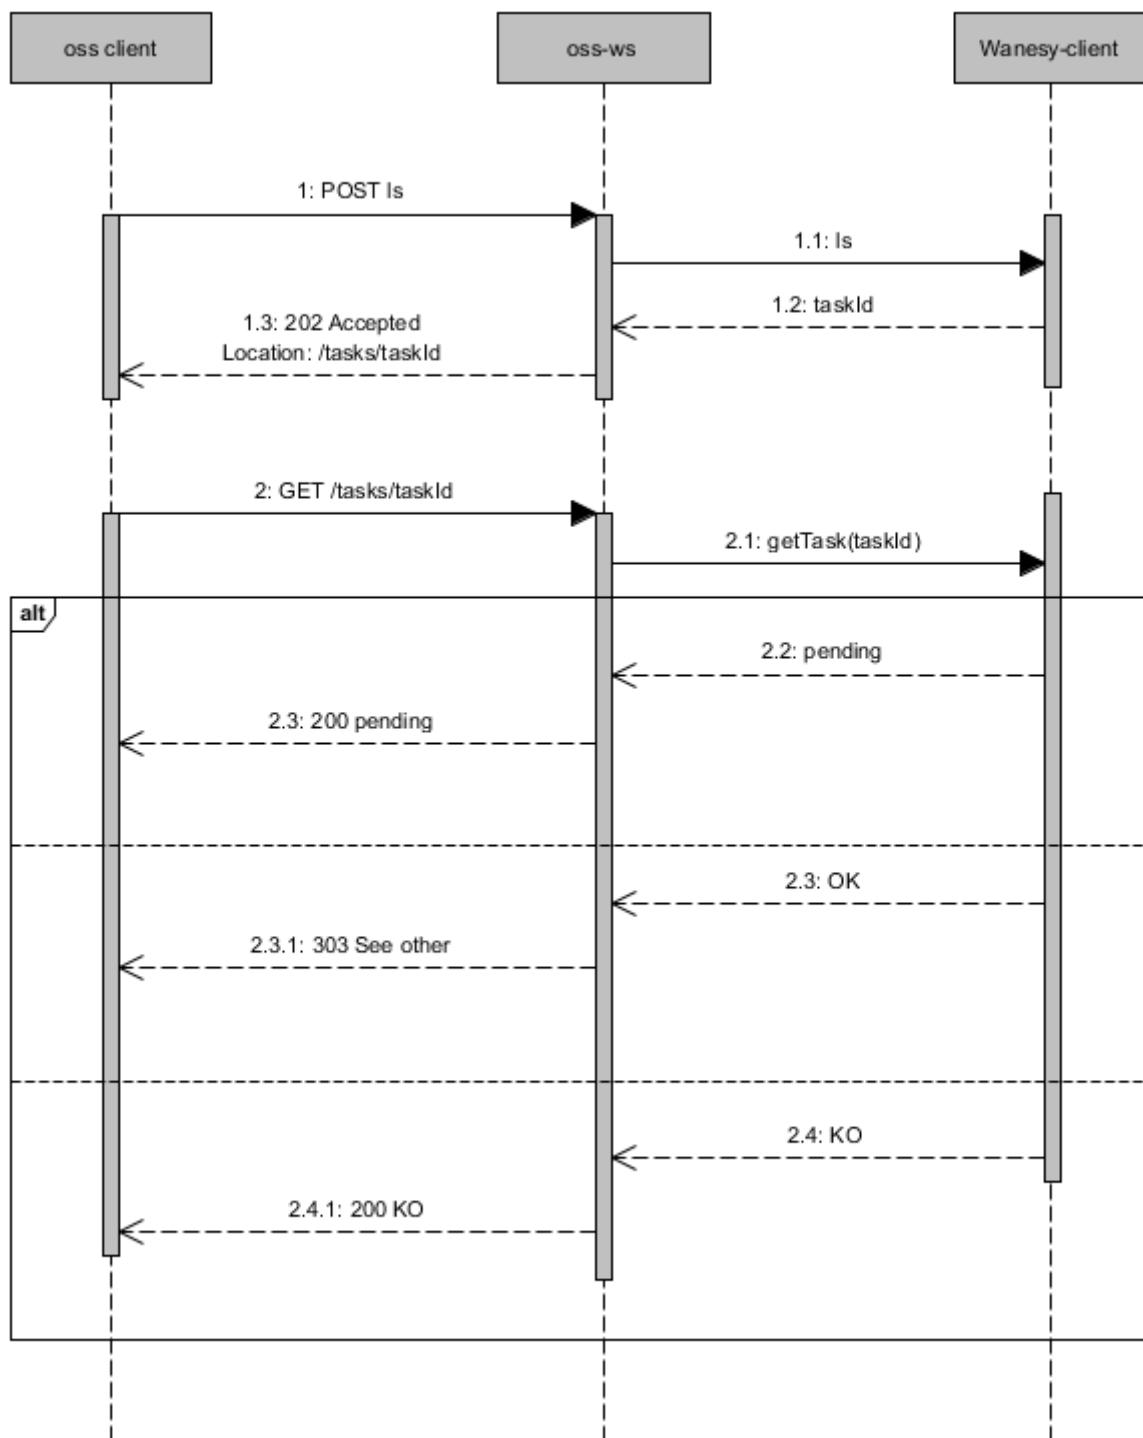

Figure 1 - Sequence diagram of asynchronous web service

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		

L'exécution d'un web service asynchrone renvoie un statut 202 Accepted.

Le header Content-Type contient l'URI du web service qu'il faut interroger régulièrement pour obtenir la tâche rattachée à ce web service asynchrone.

2.10.1 Criteria request parameter

A criteria is a list of (key, value) that are attached to a task during the creation phase. This criteria will be used later for searching some specific tasks.

Syntax

```
Criteria=<key>=<value>
criteria=key1=value1&criteria=key2=value2, ... &criteria=keyn=valuen
If the key contains leading and trailing whitespace they are deleted.
```

Reserved keys

A list of keys are reserved to the application usage, so the user cannot use them :

```
customerId,
userId,
fleetId,
equipmentId,
equipmentEui,
firmwareFileName,
modemLocation,
spectrumFileName
```

2.11 Simple response

A simple response is a response which contains only one entity with its fields.

For example, the request GET /users/{userId} will return a User resource.

The resources returned in the response body are called Data Transfer Object. In the above example, the object returned is more precisely a UserDto. All the DTO are described in the Annex A.

The representation of the these DTO is JSON.

The features available for a simple response are :

- Filtering

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.12 Paginated response

A multiple response is used when the response contains a list of entities.
 For example the request GET /users will return a list of UserDto.

Those entities are not sent in one time but page by page with the pagination functionality.
 The features available for a paginated web services are :

- Filtering
- Pagination
- Sorting
- Searching

2.12.1 Pagination

The web services that return a list are paginated in order to ovoid to send a huge amount of data to the client.

The request specifies two query parameters the user can set : the page number `page` and the page size `pageSize`, which are set to a default value when omitted.

The response body contains :

- `page` : page number (the page you want to display 1 by default)
- `pageSize` : page size (the number of elements per page, 50 by default)
- `nbPages` : total number of pages
- `count` : *number of elements in the page*
- `totalCount` : total number of elements

The response of a paginated list contains an array of `Links` which allow to navigate through the differents pages :

- `first` : absolute URI to go to the first page
- `last` : absolute URI to go to the last page
- `next` : absolute URI to go to the next page
- `previous` : absolute URI to go to the previous page

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

Rules

- 1) If the user sets a page value which exceeds the number of pages, an error occurs with a 400 status and an error message in the body.
- 2) If the user sets a page < 1 an error occurs with a 400 status and an error message in the body.
- 3) If the user specifies a pageSize which exceeds the total number of elements (totalCount), then the pageSize will be set by the server to the count value.

2.12.2 Sorting the results

The web services which return lists of DTO can use the optional parameter `sort` in order to obtain a sorted result.

The syntax of the parameter is :

`sort=[operator]<field>,[operator]<field>`

operator

+	ascending
-	descending

field : a field of the DTO

Examples:

<code>sort=+name</code>	: ascending sort by name
<code>sort=-name</code>	: descending sort by name
<code>sort=-date,+name</code>	: descending sort by date and ascending by name

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.12.3 Searching

The search parameter is used to specify a search query in order to retrieve entities that matching the condition. A search is therefore used when a paginated result is sent.

Syntax

```
search = e|c
e = expression = <operator><operand><operation>[value]
c = condition = <or|and>(<c|e>,<c|e>,...<c|e>)
operator = OR|AND|NOT
```

The operand is the name of a DTO property. For example, for a customer, it could be `id`, `name`.

Condition

Field	Type	Description
operator	string	{OR, AND, NOT}
operand	string	A DTO field
values	string[]	An array of string
conditions	Condition[]	The list of conditions to combine with an OR or AND operator

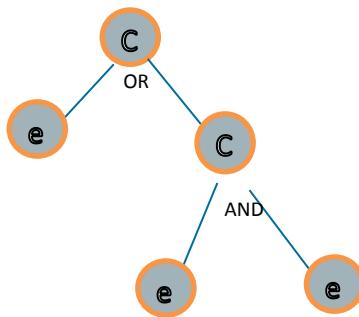

Figure 2 - Condition tree example

2.12.3.1 Nested operand

A nested operand corresponds to an operand of a child component.

Syntax: <operand>[.]<operand>

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
Strict confidential	Page 30 / 349	

For example, if you want to use the `cpu` property of a `state` entity, the syntax will be :
`state.cpu`

All the available operations are listed in the above table.

Operation	Description
<code>eq</code>	equals to
<code>ne</code>	not equals to
<code>gt</code>	greater than
<code>lt</code>	less than
<code>gte</code>	greater than or equals to
<code>lte</code>	less than or equals to
<code>in</code>	in set
<code>bet</code>	between
<code>like</code>	like operation, * is a special character Examples : <code>te*</code> : words starting by te <code>*te</code> : words ending by te <code>*te*</code> : words containing te

Examples

Example 1 : `name = foo`

```
{
  "operand": "name",
  "operation": "eq",
  "values": ["foo"]
}
```

The request param will be :

```
?search={"operand":"name", "operation":"eq", "values":["foo"]}
```

Example 2 : (`name = foo1`) OR (`name = foo2`)

```
{
  "operator": "OR",
  "conditions": [
    {
      "operand": "name",
      "operation": "eq",
      "values": ["foo1"]
    }
  ]
}
```

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights

```

        },
        {
            "operand": "name",
            "operation": "eq",
            "values": ["foo2"]
        }
    ]
}

```

Example 3 : (name = foo1) OR ((name = foo2) AND (id > 10))

```

{
    "operator": "OR",
    "conditions": [
        {
            "operator": "AND",
            "conditions": [
                {
                    "operator": "OR",
                    "conditions": [
                        {
                            "operator": "eq",
                            "values": ["foo1"]
                        }
                    ]
                }
            ]
        }
    ]
}

```

Example 4 : id in {3,5}

```
{
    "operand": "id",
    "operation": "in",
    "values": ["3", "5"]
}
```

Example 5 : name like 'fo%

```
{
    "operand": "name",
    "operation": "like",
    "values": ["fo*"]
```

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

}

Example 6 : name != null

```
{
    "operand": "name",
    "operation": "ne",
    "values": null
}
alternative syntax :
{
    "operand": "name",
    "operation": "ne",
    "values": []
}
other syntax (without values field)
{
    "operand": "name",
    "operation": "ne"
}
```

Example 7 : connected == true

```
{
    "operand": "connected",
    "operation": "eq",
    "values": ["true"]
}
```

Example of web service usage :

```
GET
/customers?search={"operand":"name", "operation":"eq", "values":["foo"]}
}
```

2.12.4 Versioning

Most of time the modifications done on a web service ensure a backward compatibility. But sometimes the way to request the web service, or the way to analyse the response need to define an upgraded version of the web service. If all the users agreed with this new version, the old web service may be deprecated or deleted, but it is rarely the cases : we need to satisfy the new version but also ensure that nothing has changed for the users of the old version. The principle of the versionning adopted for the oss web services is to define a version number in the request headers `Accept` and `Content-Type`, according to the HTTP content negotiation specification.

Instead of using the common way for defining that we manipulate json (`application/json`), we define a specific application string for the Kerlink oss web services :

`application/vnd.kerlink.iot-v1+json`

If a web service is upgraded to a new version, clients will be able to access the new version via a new value :

`application/vnd.kerlink.iot-v2+json`

The way to define the version the client want to retrieve is to set the `Accept` request header:

`Accept application/vnd.kerlink.iot-v1+json`

If the web service does not implement this version it will send an error (status code: **406 Not Acceptable**).

The way to define the version the client want to use when sending data in the request body is to set the `Content-Type` request header:

For the response the same principle is used but with the `Content-Type` header :

`Content-Type application/vnd.kerlink.iot-v1+json`

If the web service does not implement this version it will send an error (status code: **415 Unsupported Media Type**).

The OSS API starts with version 1 (`application/vnd.kerlink.iot-v1+json`). When a web service evolves, the client can use it by upgrading the header.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.13 Authorized field, mandatory field

Authorized and mandatory are two concepts that concerns the DTO fields that the client of the web services post in the request body.

- An authorized field is a field that can be provided by the client of the web service. An authorized field can be null.
 An example of field that is not authorized is the identifier of a resource like the customer `id` which is managed by the server side.
- A mandatory field is a field that cannot be null.

Action	Rule
Creates a new entity	At least all the authorized and mandatory fields must be provided by the client
Updates an existing entity	All the authorized fields must be provided by the client
Partially updates an existing entity	Any authorized field can be provided by the client

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 35 / 349	

2.14 Security

OSS web services are available over Transport Layer Security (TLS) layer with certificates. Most of web services require to be authenticated, so the user must first authenticate via the login web service which require to post the login and the password. This web service returns a token (JSON Web Token) which has a Time to live expiration date. All the other web services except those which don't require any authentication will consume a token. If the token has expired, the HTTP 401 status code is sent.

A token is used by sending the token value in the Authorization request header.

`Authorization: Bearer <token value>`

Two properties can be set in the properties file :

<code>jwt.secretKey</code>	defines a key that is used to build the token
<code>jwt.tokenTtl</code>	Time To Live duration of each token (in seconds)

All the password stored in the database are encrypted.

2.14.1 HTTPS

When accessible via the Saas, OSS is reachable over the https protocol, otherwise it depends on the configuration choosen by the customer.

2.14.2 JWT token

When a user call an authenticated web service, the application checks for the validity of the token:

- It is well formed and has not been modified
- It is not expired

The token contains data that are used to validate some functional rules. If one of those rules is not respected, an error will be returned. For example, the user corresponding to the token no longer exists.

2.14.3 Roles

Roles are defined to create a hierarchy in the authorized actions allowed to user.

① READER

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

The user can access to the safe endpoints that belong to its customer.
 Level from 10 to 19.

② USER

The user can access to both safe and unsafe endpoints that belong to its customer.
 Level from 20 to 29.

③ ADMIN

The user can access to both safe and unsafe endpoints that belong to its customer.
 ADMIN role is defined for some specific administration web services.
 Level from 30 to 39.

④ SUPER_ADMIN

The user can access to both safe and unsafe endpoints belonging to any customer.
 Level from 40 to 49.

A role has a level, an integer value, that allows to create the hierarchy of roles. For example the **USER** role is higher than the **READER** but less than **ADMIN** or **SUPER_ADMIN**.

2.14.3.1 User and roles

A user is attached to at least one role. The user role is used to determine if the user has the rights to access to a web service.

Note

In this document when we say for example "a user is ADMIN" it is a shortcut for a user which has role of **ADMIN**.

2.14.3.2 Web services authorization access

Each web service can be accessed if its required role matches the connected user role.

Example :

A web service requires an **ADMIN** role. The access will be authorized for **ADMIN** and **SUPER_ADMIN** users but refused for **READER** and **USER** users.

In the following description of each web service, the table contains the role pictogram:

- ① READER

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
Strict confidential	Page 37 / 349	

- ② USER
- ③ ADMIN
- ④ SUPER_ADMIN

that defines the minimum requested role the user must have.

2.15 Error management

When a web service request ends with an error, due to a client or a server, a formatted error is sent to the client in order to identify the origin of the problem and to correct it if possible.

The error sent is an ErrorDto object which is detailed in the Annex A.

The list of predefined code error is detailed in the **Erreur ! Source du renvoi introuvable.**

2.16 Common controller

Common controller contains the general web services that can be used by the specific domains : BSC, LNS and RNC

2.16.1 Conventions

In all the authenticated web services, the user used in the *Security access* and in the *Rules* sections is intended to be the authenticated user (via the Authorization header).

For example a rule like :

user.role = SUPER_ADMIN

means that the authenticated user must have a SUPER_ADMIN role.

Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.16.2 Application controller

This controller contains the web service that is considered to be the entry point of OSS.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.16.2.1 Getting the application

This web service allows to get the application data like the version, the build date.
 This web service is considered to be an healthy point (checked by a supervision system)

Since

1.1.12

The application contains a kind of dashboard of the status of OSS and its components.

Request				
Signature	Method	getApplication		
	URI	GET /application		
Parameters	Name	Type	Mandatory	Description
	fields	string		List of fields to display
	checkTkm	boolean		Indicator to verify the status of the TKM component. Default value is true.
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	ApplicationDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 41 / 349		

2.16.2.1 Creating or updating the application settings

This web service allows to create application settings.
 A list of settings is sent as a parameter.

Since

1.1.12

Security access

The connected user is SUPER_ADMIN.

Rules

- All the settings must be valid otherwise none of them will be created or updated.
- If a setting already exists, it is updated.
- If a setting overrides an existing private setting an error message occurs and all the list is rejected.

Request						
Signature	Method	createApplicationSettings			4	
	URI	POST /application/settings				
Parameters	Name	Type	Mandatory	Description		
	Name	Value				
Header	Content-Type	application/vnd.kerlink.iot-v1+json				
	Authorization	Bearer <token>				
Body	applicationSettings	ApplicationSettingDto[]				
Response						
Header	Name	Value				
	Content-Type	application/vnd.kerlink.iot-v1+json				
	Location					
Body	Status	Value				
	201	Created				
	4xx, 5xx	ErrorDto				

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.16.2.1 Getting the application settings

This web service allows to get the settings of the application.

Since

1.1.12

Security access

The connected user is READER.

Rules

Only the public settings will be returned.

Request							
Signature	Method	getApplicationSettings					
	URI	GET /application/settings					
Parameters	Name	Type	Mandatory	Description			
	fields	string		List of fields to display			
	page	integer		page number			
	pageSize	integer		page size value			
	sort	string		sort value			
	search	string		search condition			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					

Response		
Header	Name	Value
	Content-Type	application/vnd.kerlink.iot-v1+json
Body	Status	Value
	200	PaginatedDto<ApplicationSettingDto>
	4xx, 5xx	ErrorDto

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 43 / 349	

2.16.2.1 Getting an application setting

This web service allows to get an application setting.

Since

1.1.12

Security access

The connected user is READER.

Rules

If the applicationSetting is private an exception will occur.

Request					
Signature	Method	getapplicationSetting			1
	URI	GET /application/settings/{applicationSettingId}			
Parameters	Name	Type	Mandatory	Description	
	applicationSettingId	integer	✓	ApplicationSetting identifier	
	fields	string		List of fields to display	
Header	Name	Value			
	Authorization	Bearer <token>			
	Accept	application/vnd.kerlink.iot-v1+json			
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	Status	Value			
	200	ApplicationSettingDto			
	4xx, 5xx	ErrorDto			

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 44 / 349		

2.16.2.2 Updating an application setting

This web service allows to update an application setting.

Since

1.1.12

Security access

The connected user is ADMIN.

Rules

If the applicationSetting is private an exception will occur.

Request							
Signature	Method	updateApplicationSetting					
	URI	PUT /application/settings/{applicationSettingId}					
Parameters	Name	Type	Mandatory	Description			
	applicationSettingId	integer	✓	Application setting identifier			
Header	Name	Value					
	Authorization	Bearer <token>					
Body	Accept	application/vnd.kerlink.iot-v1+json					
	applicationSettingDto	ApplicationSettingDto					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	204	No content					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 45 / 349		

2.16.2.1 Deleting an application setting

This web service allows to delete an application setting.

Since

1.1.12

Security access

The connected user is ADMIN.

Rules

If the applicationSetting is private an exception will occur.

Request					
Signature	Method	deleteApplicationSetting			(3)
Parameters	Name	Type	Mandatory	Description	
	applicationSettingId	integer	✓	Application setting identifier	
Header	Name	Value			
	Authorization	Bearer <token>			
	Accept	application/vnd.kerlink.iot-v1+json			
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	Status	Value			
	204	No content			
	4xx, 5xx	ErrorDto			

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.16.2.2 Getting the list of web services

This web service allows to get the list of web services. Each web service contains metadata that describe its structure.

Although it returns a paginatedDto, this web service is not paginated. All the results are returned within the same page.

Since

2.0.2

Request				
Signature	Method	getWebServices		
	URI	GET /application/webServices		
Parameters	Name	Type	Mandatory	Description
	fields	string		List of fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<WsDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	Page 47 / 349

2.16.2.3 Getting the list of DTO

This web service allows to get the list of DTO. Each DTO contains metadata that describe its structure.

Although it returns a paginatedDto, this web service is not paginated. All the results are returned within the same page.

Since

2.0.2

Request				
Signature	Method	getDtos		
	URI	GET /application/dtos		
Parameters	Name	Type	Mandatory	Description
	role	string		The user role applied to the dtos
	fields	string		List of fields to display
	names	string		List of DTO names to filter (comma separated list)
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<MetaDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.16.2.4 Getting a DTO

This web service allows to get a DTO. A DTO contains metadata that describe its structure.

Since

2.0.2

Request				
Signature	Method	getDto		
	URI	GET /application/dtos/{name}		
Parameters	Name	Type	Mandatory	Description
	name	string	✓	DTO name
	role	string		The user role applied to the dto
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	MetaDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		Page 49 / 349

2.16.2.5 Getting the RAN logs

This web service allows retrieving logs generated by the different components of the RAN platform.

Since

2.1.0

Request							
Signature	Method	getLogs			4		
	URI	GET /application/logs					
Parameters	Name	Type	Mandatory	Description			
	page	integer		page number			
	pageSize	integer		page size value			
	fields	string		List of fields to display			
	search	string		search condition			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	200	PaginatedDto<LogDto>					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 50 / 349		

2.16.2.6 Getting the RAN logs Origins

This web service allows retrieving the list of component which generated logs on the RAN platform.

Since

2.1.0

Request					
Signature	Method	getLogsOrigins			4
Parameters	URI	GET /application/logs/origins			
Header	Name	Type	Mandatory	Description	
Header	Name	Value			
	Authorization	Bearer <token>			
	Accept				
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	Status	Value			
	200	MetaDto of strings			
	4xx, 5xx	ErrorDto			

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 51 / 349	

2.16.1 Action controller

This controller contains the web services that manage the action.
An action represents an action done by a user on a web service

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.16.1.1 Getting the list of actions

This web service allows to get the list of actions.

Since

1.1.12

Security access

The connected user is SUPER_ADMIN

Request				
Signature	Method	getActions		
	URI	GET /application/actions		
Parameters	Name	Type	Mandatory	Description
	fields	string		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
	search	string		search condition
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<ActionDto>		
	4xx, 5xx	ErrorDto		

2.16.1.1 Getting the logs of one action

Actions logs are the logs that are generated during the execution of an action.

Since

1.1.12

Security access

The connected user is SUPER_ADMIN

Request							
Signature	Method	getActionLogs			4		
	URI	GET /application/actions/{actionId}/logs					
Parameters	Name	Type	Mandatory	Description			
	actionId	integer	✓	Action identifier			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	200	string[]					
	4xx, 5xx	ErrorDto					

2.17 Base Station Controller (BSC)

The Base Station Controller is the parent controller for all the BSC controllers.
It contains the web services that manage the stations.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.1 Login controller

This controller defines the web service that allows to obtain a JWT token

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.1.1 Log in

The login web service allows a user to authenticate to the oss by providing its login and password fields, and in case of success getting a token that he will use for the next requests.
 Note : The token has an expiration date that can be defined in the properties file.

The token contains these data :

- groupId : the customer identifier
- role : maximum role of the connected user (See the chapter Roles for the list of role names)

Since

1.1.12

Rules

- The user is enabled and not expired

Request					
Signature	Method	login			
	URI	POST /application/login			
Parameters	Name	Type	Mandatory	Description	
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	userDto	UserDto (login and password)			
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	Status	Value			
	201	JwtDto			
	4xx, 5xx	ErrorDto			

Example:

```
POST /application/login
{
    "login": "john",
    "password": "7Q5aWTrMGG49d4tM"
}
```

Response

{

Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.1.2 Request a new password

When the user does not remember his password, this web service will allow him to redefine a new one. After having called this web service, the user will receive an email (defined in his profile) which will contain a link.

The user will have 15 min to change his password. After this date, the link will be no longer valid and the user will have to repeat the procedure.

Since

1.1.12

Request							
Signature	Method	requestPassword					
	URI	POST /application/login/password/request					
Parameters	Name	Type	Mandatory	Description			
	url	string	✓	The url to call for resetting the password			
Header	Name	Value					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	202	Accepted					
	4xx, 5xx	ErrorDto					

2.17.1.3 Reseting the password

This web service allows to update the user password after having requested for a new password (see requestPassword web service).

Since

1.1.12

Security access

The connected user is READER or higher.

Request					
Signature	Method	resetPassword			1
	URI	POST /application/login/password/reset			
Parameters	Name	Type	Mandatory	Description	
Header	Name	Value			
	Authorization	Bearer <token>			
Body	Content-Type	application/vnd.kerlink.iot-v1+json			
	userDto	UserDto			
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	Status	Value			
	201	JwtDto			
	4xx, 5xx	ErrorDto			

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 60 / 349	

2.17.2 Customer controller

This controller defines the web services that manage the customers.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.2.1 Creating a new customer

This web service allows to create a new customer.

Since

1.1.12

Rules

Only a SUPER_ADMIN user can write the field geolocalisationEnabled. (implicit rule)

Request					
Signature	Method	createCustomer			④
	URI	POST /application/customers			
Parameters	Name	Type	Mandatory	Description	
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
	Authorization	Bearer <token>			
Body	customerDto	CustomerDto			
Response					
Header	Name	Value

2.17.2.2 Getting a customer

This web service allows to get a customer.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request				
Signature	Method	getCustomer		1
	URI	GET /application/customers/{customerId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fields	string		List of fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	CustomerDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.2.3 Updating a customer

This web service allows to update a customer.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Rules

- Only a SUPER_ADMIN user can manage the fields maxEquipments, maxEndpoints, maxUsers
- The value of the maxEquipments cannot be less than the actual number of equipments.
- The value of the maxEndpoints cannot be less than the actual number of endpoints.
- The value of the maxUsers cannot be less than the actual number of users.

Request							
Signature	Method	updateCustomer					
	URI	PUT /application/customers/{customerId}			(3)		
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Body	customerDto	CustomerDto					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	204	No content					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.2.4 Patching a customer

This web service allows to partially update a customer.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Rules

- Only a SUPER_ADMIN user can manage the fields maxEquipments, maxEndpoints, maxUsers
- The value of the maxEquipments cannot be less than the actual number of equipments.
- The value of the maxEndpoints cannot be less than the actual number of endpoints.
- The value of the maxUsers cannot be less than the actual number of users.

Request							
Signature	Method	patchCustomer					
	URI	PATCH /application/customers/{customerId}					
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
Header	Name	Value					
	Authorization	Bearer <token>					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	customerDto	CustomerDto					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	204	No content

2.17.2.5 Deleting a customer

This web service allows to delete a customer.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request							
Signature	Method	deleteCustomer		④			
	URI	DELETE /application/customers/{customerId}					
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	204	No content					
	4xx, 5xx	ErrorDto					

2.17.2.6 Getting the list of customers

This web service allows to get the list of customers.

Since

1.1.12

Security access

The connected user is SUPER_ADMIN.

Request							
Signature	Method	getCustomers			④		
	URI	GET /application/customers					
Parameters	Name	Type	Mandatory	Description			
	fields	integer		List of fields to display			
	page	integer		page number			
	pageSize	integer		page size value			
	sort	string		sort value			
	search	string		search condition			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	200	PaginatedDto<CustomerDto>					
	4xx, 5xx	ErrorDto					

2.17.2.7 Creating the customer settings

This web service allows to create the customer settings.
 If a customer setting already exists, it is updated.

Since

1.1.12

Security access

The connected user is ADMIN.

Request					
Signature	Method	createCustomerSettings			
	URI	POST /application/customers/{customerId}/settings			(3)
Parameters	Name	Type	Mandatory	Description	
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	Authorization	Bearer <token>			
	customerSettings	CustomerSettingDto []			
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	Location				
	Status	Value			
	201	Created			
	4xx, 5xx	ErrorDto

2.17.2.9 Getting a customer setting

This web service allows to get a setting belonging to a customer.

Since

1.1.12

Security access

The connected user is READER.

Request				
Signature	Method	getCustomerSetting		1
	URI	GET /application/customers/{customerId}/settings/{customerSettingId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	customerSettingId	integer	✓	Customer setting identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	CustomerSettingDto		
	4xx, 5xx	ErrorDto		

2.17.2.10 Updating a customer setting

This web service allows to update a setting belonging to a customer.

Since

1.1.12

Security access

The connected user is ADMIN.

Request				
Signature	Method	updateCustomerSetting		
	URI	PUT /application/customers/{customerId}/settings/{customerSettingId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
Header	Name	Value		
	Authorization	Bearer <token>		
Body	Accept	application/vnd.kerlink.iot-v1+json		
	customerSettingDto	CustomerSettingDto		
Response				
Header	Name	Value

2.17.2.1 Getting the customer last events counters

This web service allows to retrieve all the last events counters attached to a customer.
 The result are aggregated by fleet.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request				
Signature	Method	getCustomerLastEventsCounters		
	URI	GET /application/customers/{customerId}/events/last/counters		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	search	string		Search condition
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<FleetLastEventCounterDto>-CustomersLastEventsCountersDto

Body	Status	Value					
	200	ApplicationDto<RoleDto>					
	4xx, 5xx	ErrorDto					

2.17.4 User controller

This controller defines the web services that manage the users.

2.17.4.1 Expiration

The `expirationDate` field is used to limit the account usage over time.

When the date is expired, the user cannot access to any web services that require an authentication.

Default value is `null` which means no limit.

If the value is less than or equals to the current date, the user is considered expired.

An expired user is counted as part of the customer users.

If the user is expired an error is returned with a HTTP 403 status code. The expire duration is provided in the error message as an ISO 8601 period.

2.17.4.2 Enabled

The `enabled` field is used to enable or disable a user.

If the user is disabled, he cannot access to any web services that require an authentication.
A disabled user is counted as part of the customer users.

If the user is disabled an error is returned with a HTTP 403 status code.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	Page 81 / 349

2.17.4.3 Creating a new user

This web service allows to create a new user. The default role for the new user is READER.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Rules

If the customer has a limited number of users, then this limit cannot be exceeded.

Request							
Signature	Method	createCustomerUser					
	URI	POST /application/customers/{customerId}/users					
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Authorization	Bearer <token>					
	userDto	UserDto					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Location	/application/customers/{customerId}/users /{userId}					
	Status	Value

2.17.4.9 Getting the connected user

This web service allows to get the authenticated user.

Since

1.1.12

Security access

The connected user is READER

Request					
Signature	Method	getAuthenticatedUser			1
	URI	GET /application/authenticatedUser			
Parameters	Name	Type	Mandatory	Description	
	fields	string		List of fields to display	
Header	Name	Value			
	Authorization	Bearer <token>			
	Accept	application/vnd.kerlink.iot-v1+json			
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	Status	Value			
	200	UserDto			
	4xx, 5xx	ErrorDto			

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights

2.17.4.10 Getting the user roles

This web service retrieves the roles of a user.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request				
Signature	Method	getUserRoles		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	The customer identifier
	fleetId	integer	✓	The fleet identifier
	fields	string		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
	search	string		search condition
	Name	Value		
Header	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<RoleDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.4.11 Adding a role to a user

This web service allows to add a role to a user.

Since

1.1.12

Security access

- authenticatedUser.role ≥ ADMIN
- authenticatedUser.role = SUPER_ADMIN OR authenticatedUser.customer.id = customerId

Rules

- authenticatedUser.id ≠ userId AND (authenticatedUser.role = SUPER_ADMIN OR (authenticatedUser.role = ADMIN AND authenticatedUser.role ≥ user.role))
- The level role cannot be greater than the maximum role of the authenticated user

Request							
Signature	Method	addRoleToUser			(3)		
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	The customer identifier			
	userId	integer	✓	The user identifier			
	roleId	integer	✓	The role identifier			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	204	No Content					
	4xx, 5xx	ErrorDto

Strict confidential	Page 90 / 349		

2.17.4.12 Removing a role from a user

This web service allows to remove a role from the list of roles of a user.

Since

1.1.12

- authenticatedUser.role ≥ ADMIN
- authenticatedUser.role = SUPER_ADMIN OR authenticatedUser.customer.id = customerId

Rules

- authenticatedUser.id ≠ userId AND (authenticatedUser.role = SUPER_ADMIN OR (authenticatedUser.role = ADMIN AND authenticatedUser.role ≥ user.role))

Request							
Signature	Method	removeRoleFromUser			(3)		
	URI	DELETE /application/customers/{customerId}/users/{userId}/roles/{roleId}					
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	The customer identifier			
	userId	integer	✓	The user identifier			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	204	No Content					
	4xx, 5xx	ErrorDto

	Page 91 / 349		

2.17.5 User selection controller

A selection is a list of typed items attached to a user. The main use case is to manage a user cart.

A selection has a name and a type. The type defines the type of items that are in the selection. Two types are possible :

- LORA_STATION (for LoraStation entity)
- ENDPOINT (for Endpoint entity)

A selection must be homogeneous, mixing the types is impossible.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.5.1 Creating a new user selection

This web service allows to create a new user selection.

Since

2.1.0

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request							
Signature	Method	createUserSelection			2		
	URI	POST /application/customers/{customerId}/users/{userId}/selections					
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
	userId	integer	✓	User identifier			
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
	Authorization	Bearer <token>					
Body	selectionDto	SelectionDto					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
	Location	/application/customers/{customerId}/users/{userId}/selections/{selectionId}					
Body	Status	Value					
	201	Created

2.17.6.7 Getting the list of fleets

This web service allows to get the list of fleets.

Since

1.1.12

Security access

The connected user is at least READER

Rules

If the role is not SUPER_ADMIN, fleets are filtering on the connected user customer.

Request				
Signature	Method	getFleets		(1)
	URI	GET /application/fleets		
Parameters	Name	Type	Mandatory	Description
	fields	integer		List of DTO fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
	search	string		search condition
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<FleetDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.6.8 Getting the fleet last operations

This web service allows to retrieve the last operations of a fleet.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer

Request				
Signature	Method	getFleetLastOperations		(1)
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/lastOperations		
Parameters	Name	Type	Mandatory	Description
	fields	integer		List of DTO fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<LastOperationDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 106 / 349		

2.17.6.9 Getting the fleet statistics

This web service allows to retrieve the statistics of all the equipments of a fleet.
 The statistics consists of counting the number of equipments for which a numeric metric belongs to a range.

Since

1.1.12

Note

The statistic of each metric concerns the average value.

Although it returns a paginatedDto, this web service is not paginated. All the results are returned within the same page.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer

Request					
Signature	Method	getEquipmentsStatistics			1
Parameters	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/statistics			
	Name	Type	Mandatory	Description	
	customerId	integer	✓	Customer identifier	
	fleetId	integer	✓	Fleet identifier	
	metricNames	string	✓	List of metric names : m1,m2,m3 { ALTITUDE, CPU, EXTRA_DISK, GPS_LOCK_RATIO, GPS_SATELLITES_NUMBER, LATITUDE, LONGITUDE, RAM, RSSI, SUPPLY_POWER_MILLI_VOLT, SYSTEM_DISK, TEMPERATURE, USER_DISK }	
	ranges	string	✓	Range values ranges : min,max; ... min,max Example : 10,20 means 10 ≤ value ≤ 20 min : integer or null max: integer or null	

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

				null means no limit. For example null, 10 means value \leq 10 35, null means value \geq 35
	page	integer		page number

2.17.6.10 Getting the customer fleets

This web service allows to retrieve the customer list of fleets.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Counting the last events

If the fields parameter contains the value lastEventCounters a treatment is launched to count the last events attached to this fleet.

Request				
Signature	Method	getCustomerFleets		1
	URI	GET /application/customers/{customerId}/fleets		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	The customer identifier
	page	integer		Page number
	pageSize	integer		Page size value
	sort	string		Sort value
	search	string		Search condition
	fields	integer		List of DTO fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<FleetDto>		
	4xx, 5xx	ErrorDto

2.17.6.11 Getting a customer fleet

This web service allows to retrieve a fleet from the customer list of fleets.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- fleet.customer.id = customerId

Counting the last events

If the `fields` parameter contains the value `lastEventCounters` a treatment is launched to count the last events attached to this fleet.

Request							
Signature	Method	getCustomerFleet			1		
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
	userId	integer	✓	User identifier			
	fields	string		List of fields to display			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	200	FleetDto					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.6.12 Attaching a fleet to a customer

A fleet belongs to zero or one customer.

This web service allows to attach a fleet to a customer.

Since

1.1.12

Security access

The connected user is SUPER_ADMIN.

Rules

The fleet must be detached before executing the attachment.

If the customer has a limited number of equipments, then this limit cannot be exceeded.

Request				
Signature	Method	attachFleetToCustomer		
	URI	PUT /application/fleets/{fleetId}/{customerId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto

2.17.6.13 Detaching a fleet from its customer

A fleet belongs to zero or one customer.

This web service allows to detach the fleet from its customer. After this operation the fleet is an orphan fleet.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer

Request								
Signature	Method	detachFleetFromCustomer						
	URI	PUT /application/customers/{customerId}/fleets/{fleetId}/attachedFleet						
Parameters	Name	Type	Mandatory	Description				
	customerId	integer	✓	Customer identifier				
Header	Name	Value						
	Authorization	Bearer <token>						
	Accept	application/vnd.kerlink.iot-v1+json						
Response								
Header	Name	Value						
	Content-Type	application/vnd.kerlink.iot-v1+json						
Body	Status	Value						
	204	No Content						
	4xx, 5xx	ErrorDto						

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights

	Page 112 / 349		

2.17.6.1 Changing the fleet customer

This web service allows to attach the fleet to another customer.

Since

1.1.12

Security access

The connected user is SUPER_ADMIN

Rules

If the new customer has a limited number of equipments, then this limit cannot be exceeded.

Request				
Signature	Method	changeFleetCustomer		
	URI	PUT /application/customers/{customerId}/fleets/{fleetId}/attachedFleet/{newCustomerId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.6.2 Getting the fleet events

This web service retrieves the list of events of a fleet.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer

Request				
Signature	Method	getFleetEvents		
Parameters	URI	GET /application/customers/{customerId}/fleets/{fleetId}/events		
	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	type	string		Event type { CPU_ON, CPU_OFF, DISK_SYSTEM_ON, DISK_SYSTEM_OFF, DISK_USER_ON, DISK_USER_OFF, DOOR_OPEN, DOOR_CLOSED, GPS_UNLOCKED, GPS_LOCKED, RAM_ON, RAM_OFF, RSSI_ON, RSSI_OFF, TEMPERATURE_ON, TEMPERATURE_OFF, START, SHUTDOWN, RESTART, POWER_LOST, AUTOMATIC_SYSTEM_RESTORATION, AUTOMATIC_SYSTEM_RESTORATION_FACT ORY, PREVIOUS_CONFIG_RESTORATION, HELLO(15) }
	page	integer		Page number

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.6.3 Getting the fleet last events

This web service allows to retrieve the last events attached to all the equipments belonging to a fleet.

An event can be an alarm or a notification or both, depends on its value.

For example, a disconnection will produce an alarm but a reconnection will produce a notification.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer

Request							
Signature	Method	getFleetLastEvents			1		
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
	fleetId	integer	✓	Fleet identifier			
	page	integer		Page number			
	pageSize	integer		Page size value			
	startDate	integer	✓	The start date of the period			
	endDate	integer	✓	The end date of the period			
	fields	string		List of DTO fields to display			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	200	PaginatedDto<LastEventDto>					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Strict confidential	Page 116 / 349		

2.17.6.4 Getting the fleet last events counters

This web service allows to retrieve the last events counters attached to all the equipments belonging to a fleet.

The response is a paginatedDto with one page.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer

Request				
Signature	Method	getFleetLastEventsCounters		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/events/last/counters		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	search	string		Search condition
	fields	string		List of DTO fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	FleetLastEventCounterDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD

2.17.7 Repository controller

This controller defines the web services that manage the repository.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.7.1 Getting a file from the repository

This web service allows to get a file from the repository.

Three kinds of files can be retrieved :

- a spectrum file
- a firmware file
- a general file (exchange)

Since

1.1.12

Request				
Signature	Method	getFile		
	URI	GET /application/repo		
Parameters	Name	Type	Mandatory	Description
	location	string	✓	The location type {exchange, spectrum, firmware}
Header	Name	Value		
Response				
Header	Name	Value		
	Content-Type	application/octet-stream		
Body	Status	Value		
	200	File content		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights

2.17.7.2 Putting a file on the repository

This web service allows to put a file from the repository. Three kinds of files can be put :

- a spectrum file
- a firmware file
- a general file (exchange)

Since

1.1.12

Request					
Signature	Method	putFile			
	URI	POST /application/repo			
Parameters	Name	Type	Mandatory	Description	
	file	multipart/form-data	✓	The file stream	
	location	string	✓	The location type {exchange, spectrum, firmware}	
	fileName	string	✓	The file name	
Header	Name	Value			
Response					
Header	Name	Value			
Body	Status	Value			
	204	No content			
	4xx, 5xx	ErrorDto			

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.8 Equipment controller

This controller defines the web services that manage the equipments.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.8.1 Getting the list of equipements

This web service allows to get the list of equipments.

If the field `lastStatistics` is provided in the list of visible fields then the response will contain the `lastStatistics` of the equipment.

Last events are not provided.

Since

1.1.12

Security access

The connected user is SUPER_ADMIN.

Request							
Signature	Method	getEquipments			④		
	URI	GET /application/equipments					
Parameters	Name	Type	Mandatory	Description			
	fields	integer		List of DTO fields to display			
	page	integer		page number			
	pageSize	integer		page size value			
	sort	string		sort value			
	search	string		search condition			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					

Response					
Header	Name	Value			
Body	Content-Type	application/vnd.kerlink.iot-v1+json			
	Status	Value			
	200	PaginatedDto<EquipmentDto>			
	4xx, 5xx	ErrorDto

2.17.8.2 Getting a fleet equipment

This web service retrieves an equipment of a fleet.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request								
Signature	Method	getFleetEquipment						
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}						
Parameters	Name	Type	Mandatory	Description				
	customerId	integer	✓	Customer identifier				
	fleetId	integer	✓	Fleet identifier				
	equipmentId	integer	✓	Equipment identifier				
Header	Name	Value						
	Authorization	Bearer <token>						
	Accept	application/vnd.kerlink.iot-v1+json						
Response								
Header	Name	Value						
	Content-Type	application/vnd.kerlink.iot-v1+json						
Body	Status	Value

2.17.8.5 Getting the current equipment control task

Retrieves the result of the createEquipmentLsCommand task.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).

Rules

The status of the task must be “OK”.

Request				
Signature	Method	getCurrentEquipmentControlTask		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/control/{taskId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	taskId	integer	✓	Task identifier
	fields	string		List of fields to display

2.17.8.7 Getting the equipment SNMP logs

This web service retrieves the SNMP logs of an equipment.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	getEquipmentSnmpLogs		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/snmpLogs		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	page	integer		page number
	pageSize	integer		page size value
	startDate	integer	✓	The start date of the period
	endDate	integer	✓	The end date of the period
	fields	string		List of DTO fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<EquipmentSnmpLogDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 136 / 349		

2.17.8.8 Getting the SNMP logs of a transaction

This web service retrieves the SNMP logs which correspond to the same transaction.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer

Request				
Signature	Method	getEquipmentsSnmpLogs		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/snmpLogs		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	transactionId	string		The task transaction value
	page	integer		Page number
	pageSize	integer		Page size value
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<EquipmentSnmpLogDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 137 / 349		

2.17.8.9 Getting the equipment last operations

This web service retrieves the last operations of an equipment.

An operation is an action done on an equipment which results in an asynchronous task.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	getEquipmentLastOperations		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/lastOperations		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
	search	string		search criteria
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<LastOperationDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.8.10 Getting the equipment versions

This web service allows to retrieve the versions of an equipment.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	getEquipmentVersions		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/versions		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<EquipmentVersionDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.8.11 Getting the last equipment versions

This web service allows to retrieve the last version of an equipment.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	getLastEquipmentVersion		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/versions/last		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto< EquipmentVersionDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.8.12 Getting the equipment current version

This web service allows to retrieve the current version of an equipment. This web service is asynchronous. The result will be accessible via `getCurrentEquipmentVersionTask`.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).
- The fleet belongs to the customer.
- The equipment belongs to the fleet.

Request							
Signature	Method	getCurrentEquipmentVersion			 		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/versions/current					
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
	fleetId	integer	✓	Fleet identifier			
	equipmentId	integer	✓	Equipment identifier			
	criteria	string		Task criteria			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
	Content-Location	/application/tasks/{taskId}					
Body	Status	Value					
	200	TaskDto					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 141 / 349		

2.17.8.13 Getting the equipment current version task

This web service allows to retrieve the current version result of an equipment.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).

Rules

The status of the task must be “OK”.

Request				
Signature	Method	getCurrentEquipmentVersionTask		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/versions/current/{taskId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	taskId	integer	✓	Task identifier
	criteria	string		Task criteria
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	EquipmentVersionDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 142 / 349		

2.17.8.14 Changing the equipment fleet

This web service allows to move an equipment from a fleet to another.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Rules

- If the new fleet has a limited number of equipments, then this limit cannot be exceeded.

Request				
Signature	Method	changeEquipmentFleet		
	URI	PUT /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/{newFleetId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights

	Page 143 / 349		

2.17.8.15 Getting the current equipment management

This web service allows to retrieve the management part of an equipment.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	getCurrentEquipmentManagement		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/management		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Content-Location	/application/tasks/{taskId}		
Body	Status	Value		
	202	TaskDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.8.16 Getting the current equipment management task

Retrieves the result of the getCurrentEquipmentManagement task.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request				
Signature	Method	getCurrentEquipmentManagementTask		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/management/{taskId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	taskId	integer	✓	Task identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	EquipmentManagementDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.8.17 Updating the current equipment management

This web services allow to update the current equipment management data.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request							
Signature	Method	updateCurrentEquipmentManagement			(1) 4		
	URI	PUT /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/management					
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
	fleetId	integer	✓	Fleet identifier			
	equipmentId	integer	✓	Equipment identifier			
	taskId	integer	✓	Task identifier			
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Body	equipmentManagementDto	EquipmentManagementDto					

Response		
Header	Name	Value
	Content-Type	application/vnd.kerlink.iot-v1+json
Body	Status	Value
	202	TaskDto
	4xx, 5xx	ErrorDto

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.8.18 Updating the firmware of a list of equipments

This web services allow to update the firmware of a list of equipments identified by their EUI.

Since

1.1.12

Notes

- This web service is asynchronous.
- The firmware file name is renammed like this :

<originFileName>_<UUID>.<extension> where UUID is a unique string

Example : firmware_2016.05v1.5_cd31160f-95b3-471b-a0a4-f524ed7d53b9.tar.gz

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer

Rules

- The file extension of the firmware must belong to the list : {tar.gz, tgz, ipk, tar}

Request				
Signature	Method	updateEquipmentsFirmware		
	URI	POST /application/customers/{customerId}/fleets/{fleetId}/equipments/firmware		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	euis	string	✓	A comma separated list of EUI
	when	string		The date when to execute the update (EPOCH ms)
	file	multipart /form-data	✓	The firmware file
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, firmwareFileName
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	202	PaginatedDto<TaskDto>		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.9.1 Executing a ls command on an equipment

This web service allows to execute the command ls on the equipment. It browses the directory non recursively.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	createEquipmentLsCommand		
	URI	POST /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands/ls		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	directory	string	✓	The absolute path to browse (example : /tmp/dir)
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Content-Location	/application/tasks/{taskId}		
Body	Status	Value		
	202	TaskDto

2.17.9.2 Getting the ls command result

Retrieves the result of an ls command on an equipment (createEquipmentLsCommand)

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).

Rules

The status of the task must be "OK".

Request				
Signature	Method	getEquipmentLsCommandTask		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands/ls/{taskId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	taskId	integer	✓	Task identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<FileDto>		
	4xx, 5xx	ErrorDto

2.17.9.3 Executing a `mkdir` command on an equipment

This web service allows to execute the command `mkdir` on an equipment.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	createEquipmentMkDirCommand		
	URI	POST /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands/mkdir		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	directory	string	✓	absolute path of the directory to create (ex: /tmp/conf)
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response

2.17.9.4 Executing a get command on an equipment

This web service allows to retrieve a file from an equipment.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	createEquipmentGetFileCommand		
	URI	POST /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands/get		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	filePath	string	✓	absolute path of the equipment file (ex: /tmp/conf/foo.txt)
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId, fileExchangeName
Header	Name	Value		
	Authorization	Bearer <token>

2.17.9.6 Executing a put command on an equipment

This web service allows to put a file from on an equipment.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	createEquipmentPutFileCommand		
	URI	POST /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands/put		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	file	string	✓	The file to put on the equipment
	destinationPath	string	✓	absolute path of the equipment directory that will receive the file (ex: /tmp/destination)
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId, fileExchangeName
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Content-Location	/application/tasks/{taskId}		
Body	Status	Value

2.17.9.7 Executing a mv command on an equipment

This web service allows to rename or move a file on an equipment.

Examples :

<code>mv /tmp/foo.txt /tmp/foo2.txt</code>	Renames foo.txt to foo2.txt
<code>mv /tmp/foo.txt /tmp/subdir</code>	Moves foo.txt to /tmp/subdir directory

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	createEquipmentMvCommand		
	URI	POST /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands/mv		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	source	string	✓	absolute source path to move or rename
	destination	string	✓	Absolute destination path of the new name or the destination directory
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json

2.17.9.8 Executing a rm command on an equipment

This web service allows to delete file on an equipment.

Examples :

<code>rm /tmp/foo.txt</code>	Deletes the file foo.txt
<code>rv /tmp</code>	Deletes /tmp directory

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	createEquipmentRmCommand		
	URI	POST /customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands/mv		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	file	string	✓	Absolute path of the file to delete

2.17.9.9 Executing a cp command on an equipment

This web service allows to copy file from source to destination on an equipment.
 If the source contains sub directories they will be recursively copied.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	createEquipmentCpCommand		
	URI	POST /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands/cp		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	source	string	✓	absolute source path to copy
	destination	string	✓	Absolute directory destination where to copy source
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId

2.17.9.10 Executing a command on an equipment

This web services allows to execute a not preformated command on the remote equipment.
Caution : Only the commands based on a request ⇔ response will be correctly managed; a command like `vi file.txt` will not work as it needs an interactive mode.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	createEquipmentCommand		
	URI	POST <code>/application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands</code>		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	command	string	✓	The linux command to execute
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId
	fields	string		List of fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Content-Location	<code>/application/tasks/{taskId}</code>

2.17.9.11 Getting the command result

This web services allows to retrieve the result of a command on an equipment (createEquipmentCommand)

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).

Rules

The status of the task must be "OK".

Request				
Signature	Method	getEquipmentCommandTask		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/equipments/{equipmentId}/commands/{taskId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
	taskId	integer	✓	Task identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value

2.17.10 *LORA station controller*

This controller defines the web services that manage the LoRa stations.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.10.1 Creating a new LORA station

Creates a new LORA station. A LORA station inherits from Equipment.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).
- The fleet belongs to the customer.

Rules

- The fields maxTxPower, allowGPSPosition, networkMaxDelayUp, networkMaxDelayDown are set in the LNS domain if the role is at least ADMIN.

Rules

- If the customer has a limited number of equipments, then this limit cannot be exceeded.

Request					
Signature	Method	createLoraStation			2
Parameters	URI	POST /application/customers/{customerId}/fleets/{fleetId}/loraStations			
	Name	Type	Mandatory	Description	
	customerId	integer	✓	Customer identifier	
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
	Authorization	Bearer <token>			
Body	loraStationDto	LoraStationDto			
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
	Location	/application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}			
Body	Status	Value			
	201	Created			
	4xx, 5xx	ErrorDto			

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Strict confidential	Page 167 / 349	

2.17.10.1 Creating a list of LORA stations

Creates several LORA stations from a CSV file for one ore more customers. CSV file contains a list of CsvLoraStationDto.

Since

2.1.0

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).
- Each fleet must be attached to a customer.

Rules

- The fields maxTxPower, allowGPSPosition, networkMaxDelayUp, networkMaxDelayDown are set in the LNS domain if the role is at least ADMIN.

Rules

- If the customer has a limited number of equipments, then this limit cannot be exceeded.

Request							
Signature	Method	createLoraStations			 		
	URI	POST /application/customers/loraStations					
Parameters	Name	Type	Mandatory	Description			
	file	multipart/form-data	✓	The CSV file which contains a list of CsvLoraStationDto			
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
	Authorization	Bearer <token>					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
	Location	/application/customers/loraStations/status?id=<progressMonitorId>					
Body	Status	Value					
	202	Accepted					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 168 / 349	

2.17.10.2 Getting the status of createLoraStations

This web service allows to retrieve the progress monitor of the createLoraStations web service.

The ProgressMonitor will be OK if at least one LoraStation is created. It can moreover be OK with errors, but those errors are in fact rows that are not treated because the LoraStations already exist.

If errors occur, the server builds a CSV file which contains all the lines in error. This file can be retrieved by following the link named `csvErrors` in the progressMonitorDto.

Purge : The monitor is purged 2 days after the last access. If the monitor is never accessed, it will be purged after 2 days .

Since

2.1.0

Request				
Signature	Method	getCreateLoraStationsStatus		2
	URI	GET /application/customers/loraStations/status		
Parameters	Name	Type	Mandatory	Description
	id	string	✓	The ProgressMonitor identifier
Header	Name	Value		
	Accept	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	ProgressMonitorDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.10.3 Getting a LORA station belonging to a customer

This web service retrieves a LORA station.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request							
Signature	Method	getCustomerLoraStation					
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}					
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
	fleetId	integer	✓	Fleet identifier			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	200	LoraStationDto					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.10.2 Updating a LORA station

This web service updates a LORA station.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).
- The fleet belongs to the customer.
- The equipment belongs to the fleet.

Rules

- The fields maxTxPower, allowGPSPosition, networkMaxDelayUp, networkMaxDelayDown are updated in the LNS domain if the role is at least ADMIN.

Request								
Signature	Method	updateLoraStation			2			
	URI	PUT /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}						
Parameters	Name	Type	Mandatory	Description				
	customerId	integer	✓	Customer identifier				
	fleetId	integer	✓	Fleet identifier				
	loraStationId	integer	✓	LoraStation identifier				
Header	Name	Value						
	Authorization	Bearer <token>

2.17.10.3 Patching a LORA station

This web service allows to patch a LORA station that is updating a subset of fields.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).
- The fleet belongs to the customer.
- The equipment belongs to the fleet.

Rules

- The fields maxTxPower, allowGPSPosition, networkMaxDelayUp, networkMaxDelayDown can be updated only if the role is at least ADMIN.

Request								
Signature	Method	patchLoraStation			2			
	URI	PATCH /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}						
Parameters	Name	Type	Mandatory	Description				
	customerId	integer	✓	Customer identifier				
	fleetId	integer	✓	Fleet identifier				
	loraStationId	integer	✓	LoraStation identifier				
Header	Name	Value						
	Authorization	Bearer <token>						
	Content-Type	application/vnd.kerlink.iot-v1+json						
Body	loraStationDto	LoraStationDto						
Response								
Header	Name	Value						
	Content-Type	application/vnd.kerlink.iot-v1+json						
Body	Status	Value						
	204	No content						
	4xx, 5xx	ErrorDto						

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.17.10.4 Deleting a LORA station

This web service deletes a LORA station.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request								
Signature	Method	deleteLoraStation			(2)			
	URI	DELETE /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}						
Parameters	Name	Type	Mandatory	Description				
	customerId	integer	✓	Customer identifier				
	fleetId	integer	✓	Fleet identifier				
Header	Name	Value						
	Authorization	Bearer <token>						
	Accept	application/vnd.kerlink.iot-v1+json						
Response								
Header	Name	Value						
	Content-Type	application/vnd.kerlink.iot-v1+json						
Body	Status	Value						
	204	No content						
	4xx, 5xx	ErrorDto

Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 174 / 349		

2.17.10.5 Deleting a list of LORA stations

This web service deletes a list of LORA stations. This web service is asynchronous. It sends a 202 Accepted response and the header `Location` allows to request for the progress monitoring.

The request body contains an array of `eui`.

If errors occur, the `result` field of the `ProgressMonitorDto` contains the set of `LoraStation` identifiers which are on error.

Since

2.2.0

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request					
Signature	Method	createLoraStationsDeletion			 
Parameters	Name	Type	Mandatory	Description	
	Name	Value			
	Authorization	Bearer <token>			
	Content-Type	application/vnd.kerlink.iot-v1+json			
	Accept	application/vnd.kerlink.iot-v1+json			
Body	euis	string[]			
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json

	Page 180 / 349		

2.17.10.4 Getting the last LORA station configuration

Retrieves the last configuration of a LORA station.
 The configuration comes from the persistence layer.

Since

1.1.12

Note

The response is a paginatedDto but the pagination feature is not available: all the LoraStationConfigurationDto objects are set in the same page.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	getLastLoraStationConfiguration		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}/configurations/last		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	loraStationId	integer	✓	LORA station identifier
Header	Name	Value		
	Authorization	Bearer <token>

2.17.10.5 Getting the current LORA station configuration

This web service allows to retrieve the current configuration of a LORA station.
 The configuration comes directly from the equipment.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	getCurrentLoraStationConfiguration		
	URI	POST /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}/configurations/current		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	loraStationId	integer	✓	LORA station identifier
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId
	fields	string		List of fields to display

2.17.10.6 Getting the current LORA station configuration task

Retrieves the result of the web service `getCurrentLoraStationConfiguration`.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).

Rules

The status of the task must be “OK”.

Request				
Signature	Method	getCurrentLoraStationConfigurationTask		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}/configurations/current/{taskId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	loraStationId	integer	✓	LORA station identifier
	taskId	integer	✓	Task identifier
	fields	string		List of fields to display

2.17.10.7 Updating the current LORA station configuration

This web service allows to update the current LORA station configuration.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Rules

- The field configVpn can be set only by a user with role ADMIN or higher

Request				
Signature	Method	updateCurrentLoraStationConfiguration		
	URI	PATCH /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}/configurations/current		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	loraStationId	integer	✓	LoraStation identifier
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId

2.17.10.8 Getting the LORA station modems

This web service retrieves the list of LORA station modems.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	getLoraStationModems		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}/modems		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	loraStationId	integer	✓	LORA station identifier
	criteria	string		Task criteria. Pre-registered are customerId, userId, fleetId, equipmentId
Header	Name	Value

2.17.10.10 Creating a LORA station modem spectrum

This web service allows to create a new spectrum analysis on one modem of a LORA station.

Since

1.1.12

Note

This web service is asynchronous.

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	createLoraStationModemSpectrum		
	URI	POST /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}/modems/{modemLocation}/spectrums		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	X	Customer identifier
	fleetId	integer	X	Fleet identifier
	loraStationId	integer	X	Lora station identifier
	modemLocation	integer	X	Modem location (starting at 1)
	duration	string	X	Duration of the spectrum analysis in seconds
	modemSerialNumber	string	X	Modem serial number
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Content-Location	/application/tasks/{taskId}

2.17.10.11 Getting a LORA station modem spectrum task

Retrieves the result of the web service `createLoraStationModemSpectrum`.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).

Rules

The status of the task must be “OK”.

Request				
Signature	Method	getLoraStationModemSpectrumTask		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}/modems/{modemLocation}/spectrums/{taskId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	loraStationId	integer	✓	Lora station identifier
	modemLocation	integer	✓	Modem location (starting at 1)
	taskId	integer	✓	Task identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/octet-stream		
Response				
Header	Name	Value		
	Content-Type	application/octet-stream

2.17.10.1 Exporting the LORA stations

This web service allows to export the LoraStations to a CSV file. This web service is asynchronous. It sends a 202 Accepted response and the header Location allows to request for the progress monitoring and for the CSV file.

The parameters sort and search refer to a LoraStationDto.

The generated CSV file is a list of CsvLoraStationDto.

Since

2.2.0

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Rules

If the parameter importable is set to true, then the csv will contain only the authorized columns of a CsvLoraStationDto.

Request				
Signature	Method	createLoraStationsExport		
	URI	POST /application/loraStations/exports		
Parameters	Name	Type	Mandatory	Description
	sort	string		Sort value (refers to LoraStationDto fields)
	search	string		Search condition (refers to LoraStationDto fields)
	fields	string		List of DTO fields to display (refers to CsvLoraStationDto fields)
	importable	boolean		true means that csv is importable from createLoraStations. Default value is false.
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Location	/application/loraStations/exports/{exportId}		
Body	Status	Value		
	202	Accepted		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
Strict confidential	Page 191 / 349		

2.17.10.2 Getting the LoraStations export

This web service allows to get the progress monitor of the LoraStations export.
 When the progress monitor is terminated, one or two links are created depending on the status :

- Link success for the successfully exported LoraStations
- Link failed for the exported LoraStations with errors

Purge : The monitor is purged 2 days after the last access. If the monitor is never accessed, it will be purged after 2 days .

Since

2.2.0

Request				
Signature	Method	getLoraStationsExport		(2)
	URI	GET /application/loraStations/exports/{exportId}		
Parameters	Name	Type	Mandatory	Description
	exportId	string	✓	The export identifier
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	ProgressMonitorDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD

2.17.11.1 Getting the numeric statistics of a LORA station

This web service retrieves the numeric statistics of a LORA station.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The fleet belongs to the customer
- The equipment belongs to the fleet

Request				
Signature	Method	getLoraStationNumericStatistics		
	URI	GET /application/customers/{customerId}/fleets/{fleetId}/loraStations/{loraStationId}/statistics/numeric		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	loraStationId	integer	✓	LORA station identifier
	temporalUnit	string	✓	{DAY, HOUR, MONTH, YEAR}
	metricNames	string		A comma separated list of metric from this set : It is extracted from the LoraStationStatisticsDto fields (numeric fields). Groups can be used too (example: @ram, @cpu) { abortCrash, abortReboot, cpuAvg, cpuHysteresis, cpuMax, cpuMin, cpuThreshold, extraDiskHysteresis, extraDiskThreshold, extraDiskUsed, gpsLockRatio, gpsSatellitesNumber, gsmAvgRssi, gsmMaxRssi, gsmMinRssi, gsmRssiHysteresis, gsmRssiThreshold, ramAvg,

Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.17.12.1 Getting a task

This web service allows to retrieve a task.

Since

1.1.12

If the task status is OK, the header "Location" contains the uri that will provide the task result.

If the parameter `redirect` is set to true (default), the response status is 303 See other otherwise response status is 200 OK and the response body is the TaskDto.

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN).

Request							
Signature	Method	getTask			1		
	URI	GET /application/tasks/{taskId}					
Parameters	Name	Type	Mandatory	Description			
	taskId	integer	✓	Task identifier			
	redirect	boolean		If true the response status is 303 else 200. Default is true.			
	fields	string		List of fields to display			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
	Location	Content location uri (if the task status is OK)					
Body	Status	Value					
	200 or 303	TaskDto or a the contextual DTO					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
Strict confidential	Page 200 / 349		

2.17.12.2 Getting a list of tasks

This web service retrieves a list of tasks matching the parameters.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request				
Signature	Method	getTasks		
	URI	GET /application/tasks		
	Name	Type	Mandatory	Description
	startDate	integer		The start date of the period
	endDate	integer		The end date of the period
	eui	string		The equipment EUI
	criteria	string[][]		A comma separated list of status key=value A logical OR operation is used between the members. ex: criteria=customerId=10,fleetId=78 =>(customerId=10) OR (fleetId=78)
	status	string[]		A comma separated list of status {PENDING, OK, KO} A logical OR operation is used between the members. ex: status=PENDING,OK =>(status=PENDING) OR (status=OK)
	action	string[]		A comma separated list of action {FILE_EXCHANGE_ABORT, FILE_EXCHANGE_EXECUTE, GET_CONFIGURATION, GET_CONFIGURATIONS, GET_CONTROLS, GET_LAN_MODULES, GET_STATISTICS, GET_VALUES, GET VERSIONS, MANAGEMENT_EXECUTE, MANAGEMENT_GET_VALUES, SET_CONFIGURATION, SET_CONTROLS, SET_VALUES, SPECIFIC_COMMAND_ABORT, SPECIFIC_COMMAND_EXECUTE, SPECTRUM_ANALYSIS_ABORT,
Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 201 / 349			

				SPECTRUM_ANALYSIS_EXECUTE, UPDATE_ABORT, UPDATE_EXECUTE, } Exemple: action= SPECTRUM_ANALYSIS_EXECUTE,GET_VERSION =>(action= SPECTRUM_ANALYSIS_EXECUTE) OR (action=GET_VERSION)
	taskIds	string[]		A comma separated list of task identifiers
	fields	string		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<TaskDto>		
	4xx, 5xx	ErrorDto		

2.17.12.3 Getting the messages of a task

This web service allows to retrieve the messages of a task.

Although it returns a paginatedDto, this pagination functionalities are not available. Therefore all the results are returned within the same page.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request				
Signature	Method	getTaskMessages		
	URI	GET /application/tasks/{taskId}/messages		
Parameters	Name	Type	Mandatory	Description
	taskId	integer	✓	Task identifier
	redirect	boolean		If true the response status is 303 else 200. Default is true.
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json

2.19.3.3 Getting a cluster endpoint

This web service allows to get a cluster endpoint.

Since

1.1.12

Security access

- The connected user is READER
- The cluster belongs to the customer
- The endpoint belongs to the cluster

Request				
Signature	Method	getClusterEndPoint		
	URI	GET /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Cluster identifier
	endpointId	integer	✓	Endpoint identifier
	fields	string		List of fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	EndpointDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights

	Page 231 / 349		

2.19.3.4 Updating an endpoint

This web service allows to update an endpoint belonging to a cluster.

Since

1.1.12

Security access

- The connected user is ADMIN
- The cluster belongs to the customer
- The endpoint belongs to the cluster

Rules

- If the customer has a limited number of endpoints, then this limit cannot be exceeded.

Request				
Signature	Method	updateClusterEndpoint		
	URI	PATCH /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Cluster identifier
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Body	endpointDto	EndpointDto		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 232 / 349		

2.19.3.5 Deleting a cluster endpoint

This web service allows to delete an endpoint belonging to a cluster.

Since

1.1.12

Security access

- The connected user is at least ADMIN
- The cluster belongs to the customer
- The endpoint belongs to the cluster

Request				
Signature	Method	deleteClusterEndpoint		3
	URI	DELETE /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Cluster identifier
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 233 / 349	

2.19.3.6 Deleting a list of endpoints

This web service deletes a list of endpoints. This web service is asynchronous. It sends a 202 Accepted response and the header `Location` allows to request for the progress monitoring. The request body contains an array of `devEui`.
 If errors occur, the `result` field of the `ProgressMonitorDto` contains the set of endpoint identifiers which are on error.

Since

2.2.0

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request					
Signature	Method	createEndpointsDeletion			 
	URI	POST /application/endpoints/deletions			
Parameters	Name	Type	Mandatory	Description	
Header	Name	Value			
	Authorization	Bearer <token>			
Body	Content-Type	application/vnd.kerlink.iot-v1+json			
	Accept	application/vnd.kerlink.iot-v1+json			
Body	devEuis	string[]			
Response					
Header	Name	Value			
	Content-Type	application/vnd.kerlink.iot-v1+json			
Body	Location	/application/endpoints/deletions/{deletionId}			
	Status	Value			
Body	202	Accepted			
	4xx, 5xx	ErrorDto			

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 234 / 349		

2.19.3.7 Getting the endpoints deletion status

This web service allows to retrieve the progress monitor of the deleteEndpointsDeletion web service.

Purge : The monitor is purged 2 days after the last access. If the monitor is never accessed, it will be purged after 2 days.

Since

2.2.0

Request				
Signature	Method	getEndpointsDeletion		(3)
	URI	GET /application/endpoints/deletions/{deletionId}		
Parameters	Name	Type	Mandatory	Description
	deletionId	string	✓	The deletion progress monitor identifier
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	ProgressMonitorDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 235 / 349		

2.19.3.8 Moving a cluster endpoint

This web service allows to move an endpoint from a cluster to another.

Since

1.1.12

Security access

- The connected user is SUPER_ADMIN
- The cluster belongs to the customer
- The endpoint belongs to the cluster
- The new cluster belongs to the customer

Rules

- If the customer has a limited number of endpoints, then this limit cannot be exceeded.

Request				
Signature	Method	moveEndpoint		
	URI	PUT /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}/{newClusterId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Cluster identifier
	endpointId	integer	✓	Endpoint identifier
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.3.9 Getting the positions of an endpoint

This web service allows to get the positions of an endpoint.

Since

1.1.12

Security access

- The connected user is READER
- The cluster belongs to the customer
- The endpoint belongs to the cluster

Request				
Signature	Method	getEndpointPositions		1
	URI	GET /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}/positions		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Cluster identifier
	endpointId	integer	✓	Endpoint identifier
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<EndpointPositionDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 237 / 349		

2.19.3.10 Getting the LnsEquipments of an endpoint

This web service allows to get the LNS equipements who manage or have managed an endpoint.

Since

1.1.12

Security access

- The connected user is READER
- The cluster belongs to the customer
- The endpoint belongs to the cluster

Request				
Signature	Method	getEndpointLnsEquipments		
	URI	GET /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}/lnsEquipments		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Cluster identifier
	endpointId	integer	✓	Endpoint identifier
	fields	integer		List of fields to display
	startDate	integer	✓	The start date of the period
	endDate	integer	✓	The end date of the period
	page	integer		page number
	pageSize	integer		page size value
	sort	string	✓	sort value : {-lastDate,+lastDate} default is -lastDate
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<LnsEquipmentWhichSawEndpointDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 238 / 349		

2.19.3.11 Creating a list of endpoints

This web service allows to create a list of endpoints belonging to a cluster.

This web service allows to create several endpoints from a CSV file for one or more customers. CSV file contains a list of CsvEndpointDto.

Since

1.1.12

Security access

- The connected user is USER
- The connected user can manage the cluster or he is SUPER_ADMIN

Rules

- If the customer has a limited number of endpoints, then this limit cannot be exceeded.

Request							
Signature	Method	createEndpoints		(2)			
	URI	POST /application/customers/endpoints					
Parameters	Name	Type	Mandatory	Description			
	file	multipart/form-data	✓	The CSV file which contains a list of CsvEndpointDto.			
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
	Authorization	Bearer <token>					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
	Location	/application/customers/loraStations/status?id=<progressMonitorId>					
Body	Status	Value					
	202	Accepted					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 239 / 349		

2.19.3.12 Getting the status of createEndpoints

This web service allows to retrieve the progress monitor of the createEndpoints web service. The ProgressMonitor will be OK if at least one endpoint is created. It can moreover be OK with errors, but those errors are in fact rows that are not treated because the endpoints already exist.

If errors occur, the server builds a CSV file which contains all the lines in error. This file can be retrieved by following the link named `csvErrors` in the progressMonitorDto.

Purge : The monitor is purged 2 days after the last access. If the monitor is never accessed, it will be purged after 2 days .

Since

2.1.0

Request				
Signature	Method	getCreateEndpointsStatus		
	URI	GET /application/customers/endpoints/status		
Parameters	Name	Type	Mandatory	Description
	id	string	✓	The ProgressMonitor identifier
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	OK		
	4xx, 5xx	ProgressMonitorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 240 / 349		

2.19.3.13 Getting the list of endpoints

This web service allows to get the list of endpoints.

The search and the sort functionalities exclude the fields `LastRxMessageTimestamp`, `LastTxMessageTimestamp`, `FcntDown` and `Status`.

Since

1.1.12

Security access

The connected user is USER.

Request							
Signature	Method	getEndpoints					
	URI	GET /application/endpoints			(1)		
Parameters	Name	Type	Mandatory	Description			
	fields	integer		List of fields to display			
	page	integer		page number			
	pageSize	integer		page size value			
	sort	string		sort value			
	search	string		search condition			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	200	PaginatedDto<EndpointDto>					
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.3.14 Getting the list of endpoints of a cluster

This web service allows to get the list of endpoints of a cluster.

The search and the sort functionalities exclude the fields `LastRxMessageTimestamp`, `LastTxMessageTimestamp`, `FcntDown` and `Status`.

Since

1.1.12

Security access

- The connected user is ADMIN
- The cluster belongs to the customer

Request				
Signature	Method	getClusterEndpoints		
	URI	GET /application/customers/{customerId}/clusters/{clusterId}/endpoints		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Clusster identifier
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
	search	string		search condition
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value

Strict confidential	Page 242 / 349		

2.19.3.15 Getting the last events of an endpoint

This web service allows to retrieve the last events of one endpoint
 A lastEvent can be an alarm or a notification.

Since

1.1.12

Security access

- The connected user can manage the customer

Request				
Signature	Method	getEndpointLastEvents		
	URI	GET /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}/events/last		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Cluster identifier
	endpointId	string	✓	Endpoint identifier (EUI)
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<LnsLastEventDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 243 / 349		

2.19.3.16 Patching a last event of an endpoint

This web service allows to patch a event of an endpoint.

The main use case is for marking the event as read by setting the field `markAsRead` to true.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The cluster belongs to the customer
- The endpoint belongs to the cluster

Request				
Signature	Method	patchEndpointLastEvent		
	URI	PATCH /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}/events/last/{lastEventId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fleetId	integer	✓	Fleet identifier
	equipmentId	integer	✓	Equipment identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	lastEventDto	LastEventDto		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto

2.19.3.17 Getting the events of one endpoint

This web service allows to retrieve the events of one endpoint.

Since

1.1.12

Security access

The connected user can manage the customer

Request				
Signature	Method	getEndpointEvents		
	URI	GET /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}/events		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Cluster identifier
	endpointId	string	✓	Endpoint identifier (EUI)
	startDate	integer	✓	The start date of the period
	endDate	integer	✓	The end date of the period
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value

Strict confidential	Page 245 / 349		

2.19.3.18 Resetting the frame counter down of an endpoint

This web service allows to reset the frame counter down of an endpoint. It consists of setting the value of the field `fcntDown` to 0.

Since

1.1.12

Security access

- The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)
- The cluster belongs to the customer
- The endpoint belongs to the cluster

Request				
Signature	Method	resetEndpointFrameCounterDown		
	URI	PUT /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}/frameCounterDown		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	clusterId	integer	✓	Cluster identifier
	endpointId	integer	✓	Endpoint identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value

	Page 246 / 349		

2.19.3.19 Exporting the endpoints

This web service allows to export the endpoints to a CSV file. This web service is asynchronous. It sends a 202 Accepted response and the header Location allows to request for the progress monitoring and for the CSV file.
 The parameters sort and search refer to a EndpointDto.

The CSV file is a list of CsvEndpointDto.

Since

2.2.0

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Rules

If the parameter importable is set to true, then the csv will contain only the authorized columns of a CsvEndpointDto.

Request				
Signature	Method	createEndpointsExport		
	URI	POST /application/endpoints/exports		
Parameters	Name	Type	Mandatory	Description
	sort	string		Sort value (refers to EndpointDto fields)
	search	string		Search condition (refers to EndpointDto fields)
	fields	string		List of DTO fields to display (refers to CsvEndpointDto fields)
	importable	boolean		true means that csv is importable from createEndpoints. Default value is false.
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Location	/application/endpoints/exports/{exportId}		
Body	Status	Value		
	202	Accepted		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights

2.19.3.20 Getting the endpoints export

This web service allows to get the progress monitor of the endpoints export.
 When the progress monitor is terminated the link `success` allows to get the file of the exported endpoints.

Purge : The monitor is purged 2 days after the last access. If the monitor is never accessed, it will be purged after 2 days .

Since

2.2.0

Request				
Signature	Method	getEndpointsExport		(2)
	URI	GET /application/endpoints/exports/{exportId}		
Parameters	Name	Type	Mandatory	Description
	exportId	string	✓	The export identifier
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	ProgressMonitorDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.3.21 Getting the messages of an endpoint

This web service allows to retrieve the messages of one endpoint.

Since

2.2.0

Security access

The connected user is at least READER

Request				
Signature	Method	getEndpointMessages		
	URI	GET /application/customers/{customerId}/clusters/{clusterId}/endpoints/{endpointId}/messages		
Parameters	Name	Type	Mandatory	Description
	customerId	Integer	✓	The customer identifier
	clusterId	integer	✓	The cluster identifier
	endpointId	string	✓	The endpoint identifier (devEui)
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<MessageDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.4.2 patching a LNS equipment

This web service allows to update a LNS equipment.

Since

1.1.12

Security access

The connected user is ADMIN

Rules

If the customer has a limited number of equipments, then this limit cannot be exceeded.

Request				
Signature	Method	patchLnsEquipment		
	URI	PATCH /application/customers/{customerId}/lNsEquipments/{lNsEquipmentId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Authorization	Bearer <token>		
	lNsEquipmentDto	lNsEquipmentDto		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.4.3 Deleting a LNS equipment

This web service allows to delete a LNS equipment.

Since

1.1.12

Security access

The connected user is SUPER_ADMIN

Request				
Signature	Method	deleteLnsEquipment		
	URI	DELETE /application/customers/{customerId}/InsEquipments/{InsEquipmentId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
Header	customerId	string	✓	LNS equipment identifier
	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto

2.19.4.4 Getting the LNS equipments

This web service allows to get the list of LNS equipments.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request				
Signature	Method	getLnsEquipments		1
	URI	GET /application/customers/{customerId}/lNsEquipments		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
	search	string		search condition
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<LnsEquipmentDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.4.5 Getting the LNS equipment last TX messages

This web service allows to get the last TX messages sent by a LNS equipment.

Since

1.1.12

Security access

- The connected user is READER
- The LNS equipment belongs to the customer

Request						
Signature	Method	getLnsEquipmentLastTxMessages				
	URI	GET /application/customers/{customerId}/InsEquipments/{InsEquipmentId}/txMessages/last				
Parameters	Name	Type	Mandatory	Description		
	customerId	integer	✓	Customer identifier		
	InsEquipmentId	string	✓	LNS equipment identifier		
	fields	integer	List of fields to display			
Header	Name	Value				
	Authorization	Bearer <token>				
	Accept	application/vnd.kerlink.iot-v1+json				
Response						
Header	Name	Value				
	Content-Type	application/vnd.kerlink.iot-v1+json				
Body	Status	Value				
	200	PaginatedDto<TxMessageDto>				
	4xx, 5xx	ErrorDto

2.19.4.6 Getting the LNS equipment last RX messages

This web service allows to get the last RX messages received by a LNS equipment.

Since

1.1.12

Security access

- The connected user is READER
- The LNS equipment belongs to the customer

Request						
Signature	Method	getLnsEquipmentLastRxMessages				
	URI	GET /application/customers/{customerId}/InsEquipments/{InsEquipmentId}/rxMessages/last				
Parameters	Name	Type	Mandatory	Description		
	customerId	integer	✓	Customer identifier		
	InsEquipmentId	string	✓	LNS equipment identifier		
	fields	integer	List of fields to display			
Header	Name	Value				
	Authorization	Bearer <token>				
	Accept	application/vnd.kerlink.iot-v1+json				
Response						
Header	Name	Value				
	Content-Type	application/vnd.kerlink.iot-v1+json				
Body	Status	Value

2.19.4.7 Getting all LNS equipments last events

This web service allows to retrieve the last events of all the LNS equipments of one customer (equivalent of fleet).

An event can be an alarm or a notification or both, depends on its value.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request				
Signature	Method	getLnsEquipmentsLastEvents		
Parameters	URI	GET /application/customers/{customerId}/InsEquipments/events/last		
	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<LnsLastEventDto>		
	4xx, 5xx	ErrorDto		

2.19.4.8 Getting all LNS equipments last events of all customers

This web service allows to retrieve the last events of all the LNS equipments of all customers. An event can be an alarm or a notification or both, depends on its value.

Since

2.2.0

Security access

The connected is SUPER_ADMIN

Request				
Signature	Method	getLnsCustomersEquipmentsLastEvents		④
	URI	GET /application/customers/lnsEquipments/events/last		
Parameters	Name	Type	Mandatory	Description
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
	search	string		search condition
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value

2.19.4.9 Getting the events of one LNS equipment

This web service allows to retrieve the events of one LNS equipment.

Since

1.1.12

Security access

The connected user can manage the customer

Request				
Signature	Method	getLnsEquipmentEvents		
	URI	GET /application/customers/{customerId}/lnsEquipments/{lnsEquipmentId}/events		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	lnsEquipmentId	string	✓	LNS equipment identifier (EUI)
	startDate	integer	✓	The start date of the period
	endDate	integer	✓	The end date of the period
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
	search	string		search condition
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<LnsEventDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.4.10 Getting a LNS equipment last events

This web service allows to retrieve the last events of one LNS equipment.
 A lastEvent can be an alarm or a notification.

Since

1.1.12

Security access

The connected user can manage the customer

Request				
Signature	Method	getLnsEquipmentLastEvents		
	URI	GET /application/customers/{customerId}/lnsEquipments/{lnsEquipmentId}/events/last		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	lnsEquipmentId	string	✓	LNS equipment identifier (EUI)
	fields	string		List of DTO fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<LnsLastEventDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.4.11 Patching a last event of an LNS equipment

This web service allows to patch a event of a LNS equipment.

The main use case is for marking the event as read by setting the field `markAsRead` to true.

Since

1.1.12

Security access

The connected user can manage the customer (he belongs to the customer or he is SUPER_ADMIN)

Request				
Signature	Method	patchLnsEquipmentLastEvent		
	URI	PATCH /application/customers/{customerId}/InsEquipments/{InsEquipmentId}/events/last/{lastEventId}		
Parameters	Name	Type	Mandatory	Description
	customerId	integer	✓	Customer identifier
	InsEquipmentId	integer	✓	LNS equipment identifier
Header	Name	Value		
	Authorization	Bearer <token>		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	InsLastEventDto	LastEventDto		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	204	No Content		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.4.12 Getting the LNS equipments last events counters

This web service allows to retrieve the last events counters of all the LNS equipments.
 It is the equivalent of the BSC getFleetLastEventsCounters.

Since

1.1.12

Security access

The connected user can manage the cluster or he is SUPER_ADMIN

Request							
Signature	Method	getLnsEquipmentsLastEventsCounters			1		
Parameters	URI	GET /application/customers/{customerId}/lnsEquipments/events/last/counters					
Parameters	Name	Type	Mandatory	Description			
	customerId	integer	✓	Customer identifier			
Header	Name	Value					
	Authorization	Bearer <token>					
	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	200	LnsEquipmentsLastEventCountersDto					
	4xx, 5xx	ErrorDto

2.19.8.1 Starting a workflow

This web service allows starting a workflow. It returns the businessKey common to the created workflows.

Since

2.1.0

Request				
Signature	Method	startWorkflow		2
	URI	POST /application/workflow/start/{workflowName}		
Parameters	Name	Type	Mandatory	Description
	workflowName	String	✓	Name of the workflow to start
	workflowParams	String	✓	JSON of parameters
	name	String		Name of the process
	file	file		File if needed
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Body				
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	201	String - businessKey		
	4xx, 5xx	ErrorDto		

2.19.8.2 Get the list of available workflows

This web service allows retrieving the list of existing workflows.

Since

2.1.0

Request				
Signature	Method	GetWorkflowProcessDefinitionList		(2)
	URI	GET /application/workflow/processDefinition/list		
Parameters	Name	Type	Mandatory	Description
	pageSize	String		page size value
	page	String		page number
	sort	String		Sort condition (name only)
	search	String		Search condition (name or description)
	latest	Bool		If true, returns only the last version of a workflow

2.19.8.3 Get an executed workflow

This web service allows retrieving an executed workflow.

Since

2.2.0

Request				
Signature	Method	getWorkflowProcessHistory		(2)
	URI	GET /application/workflow/process/{processInstanceId}/history		
Parameters	Name	Type	Mandatory	Description
	processInstanceId	String	✓	Id of the process to retrieve
	fields	String		List of fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Body				
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json

2.19.8.4 Get the list of executed workflows

This web service allows retrieving the list of the executed workflows.

Since

2.1.0

Request				
Signature	Method	getWorkflowProcessHistoryList		(2)
	URI	GET /application/workflow/process/history/list		
Parameters	Name	Type	Mandatory	Description
	pageSize	String		page size value
	page	String		page number
	sort	String		Sort condition (processDefinitionName only)
	ended	Bool		Retrieves only ended processes if true
	search	String		Search condition (processDefinitionName only)
	fields	String		List of fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json

2.19.8.5 Get the list of executed workflows grouped by business keys

This web service allows retrieving the list of the executed workflows grouped by business keys.

Since

2.2.0

Request				
Signature	Method	GetWorkflowProcessHistoryListGroupByBusinessKey		(2)
	URI	GET /application/workflow/processByBusinessKey/history/list		
Parameters	Name	Type	Mandatory	Description
	pageSize	String		page size value
	page	String		page number
	sort	String		Sort condition (processDefinitionName only)
	ended	Bool		Retrieves only ended processes if true
	search	String		Search condition (processDefinitionName only)

2.19.8.6 Get the list of variables used in a process

This web service allows retrieving the information about the variables used in a specific process (executed workflow).

Since

2.1.0

Request				
Signature	Method	getWorkflowProcessVariables		2
	URI	GET /application/workflow/process/{processId}/variables		
Parameters	Name	Type	Mandatory	Description
	processId	String	✓	Id of the process
	pageSize	String		page size value
	page	String		page number
	sort	String		Sort condition
	fields	String		List of fields to display
Header	Name	Value		
	Authorization	Bearer <token>

2.19.8.7 Get the activity history of a process

This web service allows retrieving the information about the historic activity of a specific process (executed workflow).

Since

2.1.0

Request				
Signature	Method	getWorkflowProcessActivityHistory		
	URI	GET /application/workflow/process/{processId}/activityHistory		
Parameters	Name	Type	Mandatory	Description
	processId	String	✓	Id of the process
	pageSize	String		page size value
	page	String		page number
	sort	String		Sort condition
	fields	String		List of fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Body				
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	201	PaginatedDto<HistoricActivityInstanceDto>		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.19.8.8 Get a process definition

This web service allows retrieving a specific process definition (workflow template)

Since

2.2.0

Request				
Signature	Method	getWorkflowProcessDefinition		(2)
	URI	GET /application/workflow/processDefinition/{processDefinitionId}		
Parameters	Name	Type	Mandatory	Description
	processDefinitionId	String	✓	Id of the process definition
	fields	String		List of fields to display
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Body				
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	201	ProcessDefinitionDto		
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 282 / 349		

2.19.8.9 Delete a process definition

This web service allows deleting a specific process definition (workflow template). In reality all versions of the process definition get suspended.

Since
2.2.0

Request				
Signature	Method	deleteWorkflowProcessDefinition		④
	URI	DELETE /application/workflow/processDefinition/{processDefinitionId}		
Parameters	Name	Type	Mandatory	Description
	processDefinitionId	String	✓	Id of the process definition
Header	Name	Value		
	Authorization	Bearer <token>		
	Accept	application/vnd.kerlink.iot-v1+json		
Body				
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	201			
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 283 / 349		

2.19.8.10 Create a new workflow

This web service allows creating a new workflow (new Process Definition along with the BPMN schema).

Since

2.1.0

Request							
Signature	Method	createWorkflow			④		
	URI	POST /application/workflow/create					
Parameters	Name	Type	Mandatory	Description			
	file	File	✓	The file with the BPMN (XML)			
Header	processName	String		Name of the process			
	Name	Value					
	Authorization	Bearer <token>					
Body	Accept	application/vnd.kerlink.iot-v1+json					
Response							
Header	Name	Value					
	Content-Type	application/vnd.kerlink.iot-v1+json					
Body	Status	Value					
	201						
	4xx, 5xx	ErrorDto					

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

2.20 Location Based Service (LBS)

The LBS is a service that provide location of an endpoint.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

2.20.1 LBS Error Controller

2.20.1.1 Getting the LBS errors

This web service allows getting the errors which happened on the LBS.

Since

1.1.12

Security access

The connected user is ADMIN

Request				
Signature	Method	getLbsErrors		
	URI	GET /application/lbsErrors		(3)
Parameters	Name	Type	Mandatory	Description
	search	String		Search criteria
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	PaginatedDto<ErrorLbsDto>		
	4xx, 5xx	ErrorDto		

The only accepted search criteria is a filter on « timestamp ». Searched timestamp can be lt, gt or bet specified value(s).

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights

2.20.1.2 Getting the LBS solvers' names

This web service allows getting the list of solvers' names used in the LBS.

Since
2.0.1

Request				
Signature	Method	getLbsSolvers		
	URI	GET /application/lbsSolvers		
Parameters	Name	Type	Mandatory	Description
	fields	integer		List of fields to display
	page	integer		page number
	pageSize	integer		page size value
	sort	string		sort value
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
	Authorization	Bearer <token>		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value

Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 287 / 349		

3. OSS PUSH API

The current chapter describes the web services to be implemented by the customer. The OSS server will send the following information to the push url defined when creating a cluster.

If the decryptPayload parameter of the cluster is set to false, the customer's front-end web service will support the decryption of the content of the message and the join procedure.

Kerlink guarantees to its customers that the data of the stations will not be lost. Messages from stations will be stored and pushed to the customer. If a http 200 status is returned during push, the message is deleted. Otherwise, the message remains in the storage space for the duration of its TTL (time to live). Each pushed message contains an additional attribute to indicate that there are still messages waiting.

3.1 Push via a HTTP request

The messages are sent to the customer via the web service pushRxMessage. The customer has to install an HTTP server and configure the URL, the login and password.

3.2 Push via WebSocket

If is also possible to send messages via a WebSocket. The customer has to install a WebSocket server and configure the URL, the login and password.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	

3.3 Join request

If the decryptPayload parameter of the cluster is set to false, the JoinRequest transmitted by an endpoint will be pushed to the customer's front-end web service. This web service will handle the JoinRequest and respond with the JoinAccept if any.

Note: joinAcceptFrame is the hexadecimal representation of the Join-Accept message to be returned to the device, composed of the MHDR, the Payload and the MIC.

Since

1.1.12

Request				
Signature	Method	joinRequest		
	URI	POST {pushurl}/joinrequest		
Parameters	Name	Type	Mandatory	Description
	devEui	string	✓	endPoint identifier
	appEui	string	✓	
	joinRequestFrame	string	✓	The hexadecimal representation of the Join request received from the device, composed of the MHDR, the Payload and the MIC.
	joinAcceptFrame	string	✓	The hexadecimal representation of the plaintext Join-Accept message without the MIC, formatted by the LoRa Network Server: MHDR, AppNonce (will be replaced), NetID, DevAddr, DLSettings, RxDelay and optionally CFList (26 or 58 characters).
	loraWanVersion	string		default value : "1.0"
Header	Name	Value		
	Authorization	Basic		
	Accept Content-Type	application/vnd.kerlink.iot-v1+json		
Body	joinRequestDto	JoinRequestDto		
Response				
Header	Name	Value		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	Status	Value		
	200	Join accepted - AcceptDto		
	403	Join rejected		
	4xx, 5xx	ErrorDto

3.4 PushRxMessage

Sending a RX message to the customer. The cluster's msgDetailLevel property sets the granularity of the returned information. 3 levels are available:

- Payload: Returns only the userdata tag without motetx.
- Radio: Returns the userdata.
- Network: Returns userdata tag and gwrx.

Since

1.1.12

Request				
Signature	Method	pushRxMessage		
	URI	POST {pushUrl}/rxmessage		
Parameters	Name	Type	Mandatory	Description
	pushUrl	string	✓	The URL to where to post messages
Header	unsentMessages	bool	✓	true if there are still unsent messages
	Name	Value		
Body	Content-Type	application/vnd.kerlink.iot-v1+json		
	rxMessageDto	UnsentRxMessageDto		
Response				
Header	Name	Value		
Body	Status	Value		
	201			
	4xx, 5xx	ErrorDto

	Page 291 / 349		

3.5 TXMessageStatus

Returns the different status of a TX message (Sent to the station).

Since

1.1.12

Request				
Signature	Method	txMessage		
	URI	POST {pushUrl}/txmessage		
Parameters	Name	Type	Mandatory	Description
	msgId	integer	✓	true if there are still "pending" messages
	nbRetry	integer		
	txEvent	string	✓	{sent, ack, noack, error, timeout}
Header	Name	Value		
	Authorization	Basic		
	Content-Type	application/vnd.kerlink.iot-v1+json		
Body	txMessageDto	TxMessageDto (only msgId, nbRetry, txEvent, txStatus fields)		
Response				
Header	Name	Value		
Body	Status	Value		
	201			
	4xx, 5xx	ErrorDto		

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 292 / 349		

4. Annex A : Data Transfer Objects

A Data Transfer Object is used to send and receive an object representation in the request and response bodies.

The representation format is JSON. See the chapter Versionning for the exact syntax of the Content-Type.

The field `id` represent a surrogate key (technical unique key). It is an integer that identify the entity within the SGBDR and is therefore not provided by the client of the API.

4.1 Types

The types defined in the above arrays are not types used in a language, but generic types. For example a type integer means that the field is a mathematical integer but not a java type.

4.2 Mandatory field

A mandatory field is written in bold. If the field is mandatory according to a rule it is explained in the description column.

4.3 Authorized field

A authorized field in written in normal font, otherwhise it is in italic.

4.4 AcceptDto

Field	Type	Description
devEui	string	Endpoint identifier
joinAcceptFrame	string	The hexadecimal representation of the plaintext Join-Accept message
networkSessionKey	string	The hexadecimal representation of the Network Session Key (NwkSKey)
keySessionId	string	Session key identifier

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential

	Page 293 / 349	

4.5 ActionDto

Field	Type	Description
<i>id</i>	string	Action identifier
date	integer	Date of the action
webServiceName	string	Web service name
userLogin	string	User login
status	integer	Reponse HTTP status
duration	integer	Duration in ms
parameters	ActionParameter[]	Input and output parameters

4.6 ActionParameter

Field	Type	Description
direction	string	Direction {request, response}
location	string	Location {header, query, body, path}
key	string	Parameter key
value	string	Parameter value

4.7 AesKeyDto

Field	Type	Description
<i>id</i>	integer	Aes key identifier
aesKey	string	Aes key value
rfch	string	Radio frequency channel
startValidityDate	integer	Start date of validity (EPOCH date in ms)
endValidityDate	integer	End date of validity (EPOCH date in ms) endValidityDate > startValidityDate endValidityDate > current date

4.8 ApplicationDto

Field	Type	Description
name	string	Application name
status	string	Status {OK, KO}
vendor	string	Application provider
description	string	Description

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights

version	string	Version
date	integer	Build date (EPOCH date in ms)
components	ApplicationDto[]	List of components of the application

4.9 ApplicationSettingDto

Field	Type	Description
id	integer	identifier
category	string	A string used for grouping keys.
key	string	key
value	string	value corresponding to the key

4.10 CommandDto

Field	Type	Description
content	string	The command result

4.11 CsvEndpointDto

Field	Type	Description
devEui	string	64 bit end-device id, EUI-64 (unique)
groupId	integer	Group identifier (customer)
appEui	string	Global application identifier in IEEE EUI64 (mandatory if activation = OTAA and cluster decryption = true)
devAddr	string	32 bit device address (non-unique) within the current network (mandatory if activation = ABP)
classType	string	{ A, B, C }
region	string	Endpoint region { AMERICAS_902_928, ASIA_915_928, AUSTRALIA_915_928, CHINA_779_787, EUROPE_433_433, }

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

		<pre> EUROPE_863_870, }</pre>
<i>fcntDown</i>	integer	Frequency count down messages
geolocation	string	<pre> { MANUAL, COMPUTED, INHERITED }</pre>
clusterId	integer	cluster identifier
profile	string	<pre> { STATIC, WALKING, VEHICLE, RANDOM }</pre>
status	string	<pre> { NEVER_SEEN, JOINED, JOIN_MIC_ERROR, JOIN_DEVNONCE_ERROR, MIC_ERROR, FCOUNT_ERROR, UPLINK_OK }</pre>
longitude	real	Longitude in decimal degrees
latitude	real	Latitude in decimal degrees
altitude	real	meters above sea level
nwkSKey	string	AES 128 network session key
appSKey	string	AES 128 application session key
appKey	string	AES 128 application key (mandatory if activation = OTAA and cluster decryption = true)
activation	string	<pre> { OTAA, ABP }</pre>
rx1Delay	integer	Delay in seconds between TX and RX1 window [0..15]
rx2Dr	integer	RX2 spreading factor [0..15]
rx2Freq	integer	RX2 frequency
rxWindows	string	<pre> { RX1, RX2, AUTO }</pre>

Field	Type	Description
<i>id</i>	integer	LoraStation identifier
eui	string	Extended Unique Identifier. Value from the 'EUI-64' number space managed by the IEEE
name	string	Name
<i>type</i>	string	Description of the type
ip	string	ip address
port	integer	ip port
<i>connection</i>	boolean	the connection status (null means never connected)
latitude	real	Latitude in decimal degrees
longitude	real	Longitude in decimal degrees
altitude	integer	Altitude in meters
<i>bearer</i>	string	network bearer value { GSM, ETHERNET, WLAN, UNKNOWN }
region	string	Lora station region { AMERICAS_902_928, ASIA_915_928, AUSTRALIA_915_928, CHINA_779_787, EUROPE_433_433, EUROPE_863_870 }
maxTxPower	integer	maximum transmission power (dBm) min = 0, max = 30 dBm, default = 27dBm
allowGPSPosition	boolean	Authorizes the update of the GPS location default = true
networkMaxDelayUp	integer	Duration of the upstream paquet transfer to LNS (ms) min = 0 ms, max = 9999 ms, default = 350 ms
networkMaxDelayDown	integer	Duration of the downstream paquet transfer from LNS (ms) min = 0 ms, max = 9999 ms, default = 350 ms
visibility	string	Lora station visibility { PRIVATE, PUBLIC }
fleetId	integer	Fleet identifier

4.13 ClusterDto

stationsNotificationsCount	integer	Number of notifications of all the stations of all customers
clustersNotificationsCount	integer	Number of notifications of all the clusters of all customers
customers	CustomerLnsLastEventsCountersDto[]	List of customer counters

4.17.1 CustomerLnsLastEventsCountersDto

Field	Type	Description
customer	CustomerDto	The customer
stationsAlarmsCount	integer	Number of alarms of all the stations of the customer
clustersAlarmsCount	integer	Number of alarms of all the clusters of the customer
stationsNotificationsCount	integer	Number of notifications of all the stations of the customer
clustersNotificationsCount	integer	Number of notifications of all the clusters of the customer
stations	StationsCountersDto	List of stations counters
clusters	ClusterCountersDto[]	List of clusters counters

4.17.2 StationsCountersDto

Field	Type	Description
alarmsCount	integer	Number of alarms of the stations
notificationsCount	integer	Number of notifications of the stations

4.17.3 ClusterCountersDto

Field	Type	Description
cluster	ClusterDto	Cluster
alarmsCount	integer	Number of alarms of the cluster
notificationsCount	integer	Number of notifications of the cluster

4.18 FleetLastEventCounterDto

Field	Type	Description
stations	StationsLastEventCounterListDto	

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

clusters	ClusterLastEventCounterDto []	
----------	-------------------------------	--

4.18.1 StationsLastEventCounterListDto

Field	Type	Description
counters	CounterDto[]	

4.18.2 ClusterLastEventCounterDto

Field	Type	Description
cluster	ClusterLastEventCounterListDto	

4.18.3 ClusterLastEventCounterListDto

Field	Type	Description
id	integer	
name	string	
counters	CounterDto[]	

4.18.4 CounterDto

Field	Type	Description
type	string	LNS last event counter
name	string	Last event name
count	integer	Number of not read last events of type

4.19 CustomerSettingDto

Field	Type	Description
id	integer	identifier
category	string	a string used for grouping keys
key	string	key
value	string	value corresponding to the key

Unicity : {customer, category, key}

4.20 DetailedMoteRXMessageDto

Field	Type	Description
freq	real	The transmission frequency in units of MHz
modu	string	{

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 301 / 349	

		LORA, FSK }
datr	string	data rate (example SF7BW125)
codr	string	ECC code rate
adr	boolean	True when adaptative data rate is enabled

4.21 EndpointDto

Field	Type	Description
devEui	string	64 bit end-device id, EUI-64 (unique)
groupId	integer	Group identifier (customer)
appEui	string	Global application identifier in IEEE EUI64 (mandatory if activation = OTAA and cluster decryption = true)
devAddr	string	32 bit device address (non-unique) within the current network (mandatory if activation = ABP)
classType	string	{ A, B, C }
region	string	Endpoint region { AMERICAS_902_928, ASIA_915_928, AUSTRALIA_915_928, CHINA_779_787, EUROPE_433_433, EUROPE_863_870 }
<i>fcntDown</i>	integer	Frequency count down messages
geolocation	string	{ MANUAL, COMPUTED, INHERITED }
clusterId	integer	cluster identifier
clusterName	string	cluster name
profile	string	{ STATIC, WALKING, VEHICLE, RANDOM }

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	Page 302 / 349

status	string	{ NEVER_SEEN, JOINED JOIN_MIC_ERROR, JOIN_DEVNONCE_ERROR, MIC_ERROR, FCOUNT_ERROR, UPLINK_OK } No packet has ever been received (no join, no data), A valid join request has been received and answered, Last packet from mote had an invalid MIC signature Last packet from mote had an incoherent frame counter Mote is joined and at least a valid packet has been received
longitude	real	Longitude in decimal degrees
latitude	real	Latitude in decimal degrees
altitude	real	meters above sea level
nwkSKey	string	AES 128 network session key
appSKey	string	AES 128 application session key
appKey	string	AES 128 application key (mandatory if activation = OTAA and cluster decryption = true)
activation	string	{ OTAA, ABP }
rx1Delay	integer	Delay in seconds between TX and RX1 window [0..15]
rx2Dr	integer	RX2 data rate [0..15]
rx2Freq	integer	RX2 frequency
rxWindows	string	{ RX1, RX2, AUTO }
lastTxMessageTimestamp	integer	last transmitted message timestamp (epoch unix)
lastRxMessageTimestamp	integer	last received message timestamp (epoch unix)

4.22 EndpointPositionDto

Field	Type	Description
-------	------	-------------

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

	Page 303 / 349	

devEui	string	64 bit end-device id, EUI-64 (unique)
timestamp	integer	EPOCH date in ms
coordinates	real[]	Double [longitude, latitude, altitude]
type	string	Value is « Point »
algorithm	string	Exemple : RSSI

4.23 EquipmentDto

Field	Type	Description
id	integer	Equipment identifier
fleet	FleetDto	Attached fleet
eui	string	Extended Unique Identifier. Value from the 'EUI-64' number space managed by the IEEE. An 16 digit hexadecimal string value (in uppercase) Example : 7276FF00080200AE
name	string	Name
type	string	wirnet.station <type><(freq)> type { UNKNOWN, TYPE_169_OR_868, TYPE_LORA_MONO, TYPE_LORA_DUAL, TYPE_LORA_LOC } freq in MHz Example : wirnet.station TYPE_LORA_MONO(50)
ip	string	IP address
port	integer	Port
coordinates	Array[3]	Double [longitude, latitude, altitude]
Type	String	Value is « Point »
connection	boolean	connection status
door	string	Door status { OPEN, CLOSED }
gps	string	GPS status { LOCKED, UNLOCKED }
bearer	string	network bearer value {

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD

		GSM, ETHERNET, WLAN, UNKNOWN }
region	string	Equipment region { AMERICAS_902_928, ASIA_915_928, AUSTRALIA_915_928, CHINA_779_787, EUROPE_433_433, EUROPE_863_870 }
maxTxPower	integer	maximum transmission power (dBm) min = 0, max = 30 dBm, default = 27dBm
allowGPSPosition	boolean	Authorizes the update of the GPS location default = true
networkMaxDelayUp	integer	Duration of the upstream paquet transfer to LNS (ms) min = 0 ms, max = 1000 ms, default = 350 ms
networkMaxDelayDown	integer	Duration of the downstream paquet transfer from LNS (ms) min = 0 ms, max = 1000 ms, default = 350 ms
visibility	string	Equipment visibility { PRIVATE, PUBLIC } Default : true
lastEvents	LastEventDto[]	List of last events
lastStatistics	LastStatisticDto[]	List of last statistics

4.24 EquipmentConnectionDto

Field	Type	Description
id	string	Connection identifier
networkBearer	string	Network bearer {GSM, ETHERNET, WLAN, UNKNOWN}
startDate	integer	The start date of the period (EPOCH date in ms)
endDate	integer	The end date of the period (EPOCH date in ms)
eui	string	Equipment EUI
ip	string	Equipment IP address
failCause	string	Failure cause
tx	integer	Accumulated bytes transmitted to station during the period
rx	integer	Accumulated bytes received from station during the period

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights

connected	boolean	true: connected, false: disconnected, null: never connected
-----------	---------	---

4.25 EquipmentControlDto

Field	Group	Type	Description
cpuCurrent	cpu	integer	The current CPU level expressed in percent
cpuAlarmState	cpu	string	The current CPU alarm status. {ON, OFF}
cpuAlarmThreshold	cpu	integer	CPU alarm threshold [0..100] When reached, a cpu alarm is sent
cpuAlarmHysteresis	cpu	integer	CPU alarm hysteresis (%) Used in conjunction with threshold to stop the alarm when cpu is below abs(threshold - hysteresis).
diskSystemVolumeCurrent	diskSystem	integer	The current storage level of system disk volume expressed in percent of volume used
diskSystemAlarmState	diskSystem	string	The current disk system alarm status {ON, OFF}
diskSystemAlarmThreshold	diskSystem	integer	Disk system usage threshold [0..100]. When reached, a disk alarm is sent.
diskSystemAlarmHysteresis	diskSystem	integer	Disk system alarm hysteresis. Used in conjunction with threshold to stop the alarm when current disk volume is below abs(threshold - hysteresis).
diskUserVolumeCurrent	diskUser	integer	The current storage level of user disk volume expressed in percent of volume used.
diskUserAlarmState	diskUser	string	The current disk user alarm status {ON, OFF}
diskUserAlarmThreshold	diskUser	integer	Disk user usage threshold [0..100]. When reached, a disk alarm is sent.
diskUserAlarmHysteresis	diskUser	integer	Disk user alarm hysteresis. Used in conjunction with threshold to stop the alarm when user disk volume is below abs(threshold - hysteresis).
doorStateCurrent	door	string	Door state {OPEN, CLOSED}
doorThreshold	door	integer	Threshold value in lux (illuminance) to detect that the door is open [0..80000]
gpsStatusCurrent	gps	string	GPS state {LOCKED, UNLOCKED}

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 306 / 349		

gpsThreshold	gps	integer	Threshold value in seconds to trigger a GPS unlocked alarm [0..3600]
ramCurrent	ram	integer	The current RAM level. Percent memory used expressed as a percentage. Value in the range [0..100]
ramAlarmState	ram	string	The current RAM alarm status {ON, OFF}
ramAlarmThreshold	ram	integer	RAM usage threshold. When reached, a RAM alarm is sent
ramAlarmHysteresis	ram	integer	RAM alarm hysteresis. Used in conjunction with threshold to stop the alarm when ram is below abs(threshold - hysteresis).
rssiCurrent	rssi	integer	The current GSM RSSI level in dBm. Possible values are 0 113 dBm or less 1 111 dBm 2...30 109... 53 dBm 31 51 dBm or greater 99 not known or not detectable
rssiAlarmState	rssi	string	The current GSM RSSI alarm status. {ON, OFF}
rssiAlarmThreshold	rssi	integer	RSSI alarm threshold [0..100]. When reached (RSSI value below threshold), a RSSI alarm is sent.
rssiAlarmHysteresis	rssi	integer	RSSI alarm hysteresis. Used in conjunction with threshold to stop the alarm when rssi value above (threshold + hysteresis).
temperatureCurrent	temperature	integer	The current temperature in degrees Celsius.
temperatureAlarmState	temperature	string	The current temperature alarm status. {ON, OFF}
temperatureAlarmThreshold	temperature	integer	Temperature threshold. When reached, a temperature alarm is sent
temperatureAlarmHysteresis	temperature	integer	Temperature alarm hysteresis. Used in conjunction with threshold to stop the alarm when temperature below abs(threshold - hysteresis).
systemUptime		integer	Elapsed time since the system is up (ms)

4.26 EquipmentEventDto

Field	Type	Description
-------	------	-------------

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 307 / 349	

id	integer	identifier
eui	string	Equipment EUI
name	string	name
createTimeStamp	integer	Date of the event (EPOCH date in ms)
type	string	<pre> Event type { AUTOMATIC_SYSTEM_RESTORATION, AUTOMATIC_SYSTEM_RESTORATION_FACTORY, CONNECTED, DISCONNECTED, CPU_OFF, CPU_ON, DISK_SYSTEM_OFF, DISK_SYSTEM_ON, DISK_USER_OFF, DISK_USER_ON, DOOR_CLOSED, DOOR_OPEN, GPS_LOCKED, GPS_UNLOCKED, HELLO, POWER_LOST, RAM_OFF, RAM_ON, RESTART, RSSI_OFF, RSSI_ON, SHUTDOWN, START, TEMPERATURE_OFF, TEMPERATURE_ON } </pre>
port	integer	port
connected	boolean	connection status

4.27 EquipmentManagementDto

Field	Type	Description
addressType	string	The address type {UNKNOWN, IPV4, IPV6, IPV4Z, IPV6Z, DNS}
address	string	equipment IP address
managerPort	integer	equipment management port (supervision port)
managerCommunity	string	equipment manager community
agentPort	integer	equipment agent port

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

4.28 EquipmentSnmpLogDto

Field	Type	Description
id	integer	identifier
eui	string	Equipment EUI
createTimeStamp	integer	creation date (EPOCH date in ms)
origin	string	Origin { FROM_EQUIPMENT, TO_EQUIPMENT }
content	string	log content
action	string	Task action : { FILE_EXCHANGE_EXECUTE, FILE_EXCHANGE_ABORT, SPECTRUM_ANALYSIS_EXECUTE, SPECTRUM_ANALYSIS_ABORT, UPDATE_EXECUTE, UPDATE_ABORT, SPECIFIC_COMMAND_EXECUTE, SPECIFIC_COMMAND_ABORT, MANAGEMENT_EXECUTE, MANAGEMENT_GET_VALUES, SET_CONFIGURATION, GET_CONFIGURATION, GET_CONFIGURATIONS, GET_STATISTICS, GET VERSIONS, GET_VERSION, GET_VALUES, SET_VALUES, GET_CONTROLS, SET_CONTROLS, GET_LAN_MODULES }
transactionId	string	<wanesy key>.<task id>

4.29 EquipmentStateDto

Field	Type	Description
date	integer	Date of the state (EPOCH date in ms)
cpuMin	integer	minimum CPU value
cpuAvg	integer	average CPU value
cpuMax	integer	maximum CPU value
ramMin	integer	minimum RAM value

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	Page 309 / 349	

ramAvg	integer	average RAM value
ramMax	integer	maximum RAM value
systemDiskUsed	integer	used space for system disk
userDiskUsed	integer	used space for user disk
extraDiskUsed	integer	used space for extra disk
temperatureMin	integer	minimum temperature value
temperatureAvg	integer	average temperature value
temperatureMax	integer	maximum temperature value
gsmRssiMin	integer	RSSI minimum
gsmRssiAvg	integer	RSSI average
gsmRssiMax	integer	RSSI maximum
doorStatus	string	door status {OPEN, CLOSED}
gpsStatus	string	GPS status {LOCKED, UNLOCKED}
gpsLockRatio	integer	GPS lock ratio
gpsSatellitesNumber	integer	Number of satellites for GPS
gpsLatitude	real	Latitude in decimal degrees
gpsLongitude	integer	Longitude in decimal degrees
gpsAltitude	integer	GPS altitude in meters
supplyPowerSource	string	supply power {ON, OFF}
supplyPowerMillivolts	integer	supply power in millivolts

4.30 EquipmentVersionDto

Field	Type	Description
lastSuccessQueryDate	integer	Query date (EPOCH date in ms)
fromDate	integer	Start date (EPOCH date in ms)
toDate	integer	End date (EPOCH date in ms)
eui	string	Equipment EUI
hash	string	Hash code
versions	VersionDto[]	List of VersionDto

4.31 ErrorDto

Field	Type	Description
code	string	Message code
message	string	Error message
params	object[]	The array objects used to build the message

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

4.32 FleetDto

Field	Type	Description
id	integer	identifier
customer	CustomerDto	The customer owner of this fleet
name	string	name

4.33 FleetEquipmentsStatisticDto

Field	Type	Description
metricName	string	Metric name
numericStatistics	list	List of numericStatisticDto

4.34 FleetLastEventCounterDto

Field	Type	Description
fleet	FleetDto	The Fleet (visible fields : name)
counters	LastEventCounterDto[]	list of LastEventCounterDto

4.35 FileDto

Field	Type	Description
directory	boolean	boolean indicator
name	string	File name
size	integer	File size
date	integer	Last modified date (EPOCH date in ms)

4.36 HistoricActivityInstanceDto

Field	Type	Description
Id	String	The unique identifier of this historic activity instance
activityId	string	The unique identifier of the activity in the process
activityName	String	Name of this activity
activityType	String	The XML tag of the activity as in the process file
processDefinitionId	String	Process definition reference
processInstanceId	String	Process instance reference
executionId	String	Execution reference

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
Strict confidential	Page 311 / 349		

taskId	String	The corresponding task in case of task activity
calledProcessInstanceId	String	The called process instance in case of call activity
assignee	String	Assignee in case of user task activity
startTime	Date	Time when the activity instance started
endTime	Date	Time when the activity instance ended
durationInMillis	Long	Difference between endTime and startTime
deleteReason	String	Returns the delete reason for this activity, if any was set (if completed normally, no delete reason is set)
tenantId	String	The tenant identifier for the historic activity
Response	String	The result of the step execution
Status	String	The status of this activity OK - KO

4.37 HistoricProcessInstanceDto

Field	Type	Description
Id	String	The process instance id
businessKey	String	The user provided unique reference to this process instance
processDefinitionId	String	The process definition reference
processDefinitionName	String	The name of the process definition of the process instance
processDefinitionKey	String	The key of the process definition of the process instance
processDefinitionVersion	Number	The version of the process definition of the process instance
deploymentId	String	The deployment id of the process definition of the process instance
startTime	Date	The time the process was started
endTime	Date	The time the process was ended
durationInMillis	Long	Difference between endTime and startTime
endActivityId	String	Reference to the activity in which this process instance ended. Note that a process instance can have multiple end events, in this case it might not be deterministic which activity id will be referenced here
startUserId	String	The authenticated user that started this process instance. This is a workflow user and not an oss user.
startActivityId	String	The start activity
deleteReason	String	reason for the process instance's deletion
superProcessInstanceId	String	The process instance id of a potential super process instance or null if no super process instance exists
tenantId	String	The tenant identifier for the process instance
Name	String	The name for the process instance
Description	String	Description of the processVariable

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 312 / 349	

Processvariables	Map	The process variables name - value
Status	String	Status of this process instance OK - KO

4.38 HistoricVariableInstanceDto

Field	Type	Description
Id	String	The unique identifier of this variable
variableName	string	The name of this variable
variableTypeName	String	The type of the variable
Value	Object	The value of this variable
processInstanceld	String	The process instance reference
taskId	String	the task id of the task, in case this variable instance has been set locally on a task
createTime	Date	Time when the variable was created
lastUpdateTime	Date	Time when the value was last updated

4.39 HistoricProcessInstanceListByBusinessKeyDto

Field	Type	Description
businessKey	String	The business key of the process instance
processDefinitionId	String	The process definition reference
processDefinitionName	String	The name of the process definition of the process instance
processDefinitionKey	String	The key of the process definition of the process instance
processDefinitionVersion	Integer	The version of the process definition of the process instance
startTime	Date	The time the earliest process was started
endTime	Date	Time when the variable was created
nbEquipmentsSuccess	Integer	The number of equipment which have ended in success
nbEquipmentsPending	Integer	The number of equipment which still have steps to perform
nbEquipmentsFail	Integer	The number of equipment which have ended in error
historicProcessInstances	Array	The list of historic process Instances Dto with the given businessKey

4.40 ItemDto

Field	Type	Description
id	integer	Item identifier

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 313 / 349	

key	string	Item key selection type 'ENDPOINT' : devEui value selection type 'LORA STATION' : id value
-----	--------	--

4.41 JoinRequestDto

Field	Type	Description
devEui	string	Endpoint identifier
appEui	string	Application identifier
joinRequestFrame	string	The hexadecimal representation of the Join request received from the device, composed of the MHDR, the Payload and the MIC.
joinAcceptFrame	string	The hexadecimal representation of the plaintext Join-Accept message without the MIC, formatted by the LoRa Network Server: MHDR, AppNonce (will be replaced), NetID, DevAddr, DLSettings, RxDelay and optionally CFList (26 or 58 characters).
loraWanVersion	string	default value : "1.0"

4.42 JwtDto

Field	Type	Description
token	string	Token value
tokenType	string	Token type { Bearer }
expiredDate	integer	Expiration date as an (EPOCH date in ms)

4.43 LastEventCounterDto

Field	Type	Description
id	integer	LastEventCounter identifier
fleet	FleetDto	The fleet
type	string	LastEvent type { ALARM, NOTIFICATION }
name	string	LastEvent name
count	integer	Number of last events of the fleet of the type

4.44 LastEventDto

Field	Type	Description		
id	integer	Last event identifier		
equipment	EquipmentDto	The equipment		
date	integer	Last event date (EPOCH date in ms)		
domain	string	Functional domain this lastEvent come from	{	
		BSC,	LNS	
		}		
		Last event type	{	
		ALARM,	NOTIFICATION	
		}		
		Enumeration name	Type	Description
		AUTOMATIC_SYSTEM_RE STORATION	NOTIFICATION	system has been automatically restored
		AUTOMATIC_SYSTEM_RE STORATION_FACTORY	NOTIFICATION	system has been automatically restored to its factory settings
		HELLO	NOTIFICATION	sent every 24 hours to notify the presence of the station
		PREVIOUS_CONFIG_REST RATION	NOTIFICATION	previous configuration has been restored
		RESTART	NOTIFICATION	agent has been restarted.
		START	NOTIFICATION	agent has started running
		POWER_LOST	ALARM	power has been lost
name	string	SHUTDOWN	ALARM	agent is in the process of being shut down
		CONNECTION	ALARM / NOTIF.	connection is ON / OFF
		CPU	ALARM / NOTIF.	CPU alarm is ON / OFF
		DOOR	ALARM / NOTIF.	door is open / closed
		GPS	ALARM / NOTIF.	GPS is unlocked / locked
		RAM	ALARM / NOTIF.	RAM alarm is ON / OFF
		RSSI	ALARM / NOTIF.	RSSI alarm is ON / OFF
		SYSTEM_DISK	ALARM / NOTIF.	System disk alarm is ON / OFF
		TEMPERATURE	ALARM / NOTIF.	Temperature alarm is ON / OFF
		USER_DISK	ALARM / NOTIF.	User disk alarm is ON / OFF
value	string	Last event value		
markedAsRead	boolean	Last event has been read (true)		

4.45 LastOperationDto

Field	Type	Description
id	integer	Last operation identifier
equipment	EquipmentDto	The equipment
date	integer	EPOCH date in ms
type	string	The operation type { FILE_EXCHANGE, GET_CONFIGURATION, GET_CONTROLS, GET_LAN_MODULES, GET_MANAGEMENT, GET_VALUES, GET VERSIONS, SET_CONFIGURATION, SET_CONTROLS, SET_MANAGEMENT, SET_VALUES, SPECIFIC_COMMAND, SPECTRUM_ANALYSIS, UPDATE_FIRMWARE }
status	string	The operation status { PENDING, OK, KO, CANCELLED}
transactionId	string	The task transaction identifier

4.46 LastStatisticDto

Field	Type	Description
id	integer	Statistic identifier
equipment	EquipmentDto	The equipment
date	integer	EPOCH date in ms
name	string	{ ALTITUDE, CPU, EXTRA_DISK, GPS_LOCK_RATIO, GPS_SATELLITES_NUMBER, LATITUDE, LONGITUDE, RAM, RSSI, SUPPLY_POWER_MILLI_VOLT, SYSTEM_DISK, TEMPERATURE, USER_DISK }
min	real	Minimum value

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 316 / 349	

max	real	Minimum value
average	real	Average value

4.47 LbsErrorDto

Field	Type	Description
timestamp	Int	Date at which the error occurred
component	String	The component which threw the error
message	String	The error message
severity	String	WARNING, ERROR or FATAL

4.48 LbsSolverDto

Field	Type	Description
name	String	Name of the solver

4.49 LnsCounterDto

Field	Type	Description
type	string	LNS LastEvent type {ALARM, NOTIFICATION}
count	integer	Number of last Events

4.50 LnsEquipmentDto

Field	Type	Description
stationId	string	LNS equipment identifier (Extended Unique Identifier)
groupId	integer	Group identifier
longitude	real	LNS equipment longitude
latitude	real	LNS equipment latitude (decimal degrees)
altitude	real	LNS equipment altitude (decimal degrees)
region	string	LNS equipment region { AMERICAS_902_928, ASIA_915_928, AUSTRALIA_915_928, CHINA_779_787, EUROPE_433_433, EUROPE_863_870 }
maxTxPower	integer	maximum transmission power (dBm) min = 0, max = 30 dBm, default = 27dBm

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 317 / 349	

allowGPSPosition	boolean	Authorizes the update of the GPS location default = true
networkMaxDelayUp	integer	Duration of the upstream paquet transfer to LNS (ms) min = 0 ms, max = 9999 ms, default = 350 ms
networkMaxDelayDown	integer	Duration of the downstream paquet transfer from LNS (ms) min = 0 ms, max = 9999 ms, default = 350 ms
visibility	string	Equipment visibility { PRIVATE, PUBLIC }

4.51 MessageDto

Field	Type	Description
msgId	string	Message identifier
direction	string	Message direction { UPLINK, DOWNLINK }
stationId	string	LNS equipment identifier (Extended Unique Identifier)
ip	string	IP address
port	integer	port
devEui	string	64 bit end-device id, EUI-64 (unique)
fcnt	integer	Frequency count
type	string	Message typeq { JoinRequest, JoinAccept, UnconfirmedDataUp, UnconfirmedDataDown, ConfirmedDataUp, ConfirmedDataDown }
macs	MacDto[]	Mac command array
message	MessageRxpktXpkDto	The message
timestamp	integer	The message timestamp (EPOCH date in ms)

4.51.1 MacDto

Field	Type	Description
command	string	MAC command

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

		<pre>{ LinkCheckReq, LinkADRReq, DutyCycleReq, RXParamSetupReq, DevStatusReq, NewChannelReq, RXTimingSetupReq, LinkCheckAns, LinkADRAns, DutyCycleAns, RXParamSetupAns, DevStatusAns, NewChannelAns, RXTimingSetupAns }</pre>
data	string	Data

4.51.2 MessageRxpktXpkDto

Field	Type	Description
tmst	integer	The value of the gateway internal time counter at the instant the LoRa frame was received, with microsecond granularity. The value rolls over approximately every 72 minutes. The timestamp values generated by different gateways are unrelated.
time	string	Approximate UTC time of receipt of the LoRa frame. The precision is one microsecond. The format is ISO 8601 “compact” format.
tmms	integer	Approximate UTC time of receipt of the LoRa frame in the form of the number of milliseconds since the beginning of the first second of 1970
freq	real	The centre frequency of the received signal in units of MHz.
chan	integer	Concentrator “IF” channel on which the frame was received.
rfch	integer	A decimal integer representing an 8-bit field. The four more significant bits contain the identity of the radio board on which the frame was received. The four less significant bits are unused.
stat	integer	The result of the gateway's CRC test on the frame. (1 = correct; -1 = incorrect; 0 = no CRC test was performed).
modu	string	The modulation technique used: “LORA” or “FSK”.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 319 / 349	

datr	string	data rate
codr	string	ECC code rate
rssi	integer	Received signal strength, in units of dBm.
lsnr	real	The measured received signal to noise ratio in units of dB. Not used when modulation technique is FSK
size	integer	data size
data	string	data
imme	boolean	Txpk only. If true, the gateway is commanded to transmit the frame immediately.
powe	integer	Txpk only. The output power which what the gateway is commanded to transmit the frame.
ipol	boolean	Txpk only. If true, commands gateway to invert the polarity of the transmitted bits.
ncrc	boolean	Txpk only. If true, disable physical layer CRC generation by the transmitter.
rsig	RsigDto[]	The Rsig array

4.51.3 RsigDto

Field	Type	Description
ant	integer	Identifies the antenna, within the GW card. The value does not identify the antenna within the GW.
chan	integer	Concentrator "IF" channel on which the frame was received.
ftime	integer	The precise time of receipt, in units of nanoseconds.
time	integer	Approximate UTC time of receipt of the LoRa frame. The precision is one microsecond. The format is ISO 8601 'compact' format.
etime	string	The Base 64 encoding of the encrypted precise time of receipt. The encryption algorithm is AES-128. The unencrypted value contains 16 octets. The final six contain the time since the most recent second boundary, in big endian ordering and in 5 units of nanoseconds/2^5. The remaining ten octets are zero.
rssic	integer	The measured received signal strength in units of dBm
rssi	integer	The measured strength of the received LoRa signal in units of dBm. Never used if the "modu" component of containing "rxpk" object does not equal "LoRa".
rssi_sd	integer	Standard deviation of the measured strength of the received LoRa signal in units of dBm (rssi) during the LoRa frame preamble. Never used if the "modu" component of containing "rxpk" object does not equal "LoRa".

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights

Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 320 / 349	

lsnr	real	The measured received signal to noise ratio in units of dB. Not used when modulation technique is FSK.
foff	integer	The offset of the received signal centre frequency from the "freq" value of the containing "rxpk" object. The value is in units of Hertz. A positive value indicates that the measured signal is of higher frequency than the "rxpk"."freq" value.
timefromgateway	boolean	Time given by gateway.
ft2d	integer	The correction that should be applied to the fine timestamp carried in the JSON object "etime". The corrected timestamp is the sum of "ft2d" and the decrypted "etime".
rfsbsb	real	The ratio of the energy of the full band signal to that of the sum of the sub band signals, expressed as a percentage.
rs2s1	real	The ratio of the entergy of the Sub-band 2 signal to the energy of the Sub-band 1 signal.

4.52 LnsEventDto

Field	Type	Description
id	integer	LNS event identifier
date	integer	Event date (EPOCH date in ms)
objectEui	string	The object Extended Unique Identifier. Object can be a LnsEquipment or an Endpoint.
type	string	Event type <pre>{ ALARM, NOTIFICATION }</pre>
name	string	Event name <pre>{ NEVER_SEEN, JOINED, JOIN_MIC_ERROR, JOIN_DEV_NONCE_ERROR, UPLINK_OK, FCOUNT_ERROR, MIC_ERROR, APP_NOT_EXIST, QUEUE, NET_ADDR, REQUEST_NOT_EXIST, CLUSTER_NOT_EXIST, MOTE_NOT_EXIST, APP_KEY, TX_TIMEOUT, TX_NO_ACK, TX_ERROR, RX_ERROR, }</pre>

		FCOUNT_UPDATE, CNT_NOT_SYNC }
value	string	Last event value

4.53 LnsEquipmentsLastEventCountersDto

Field	Type	Description
stations	StationsLastEventCounterListDto	

4.53.1 StationsLastEventCounterListDto

Field	Type	Description
counters	CounterDto[]	

4.53.2 CounterDto

Field	Type	Description
type	string	LNS last event counter
name	string	Last event name
count	integer	Number of not read last events of type

4.54 LnsEquipmentWhichSawEndpointDto

Field	Type	Description
lastDate	integer	EPOCH date in ms when the equipment "saw" the endpoint.
lnsEquipment	LnsEquipmentDto	The LNS equipment

4.55 LnsLastEventDto

Field	Type	Description
id	integer	LNS last event identifier
groupId	integer	Customer identifier
customerName	string	Customer name
date	integer	Last event date (EPOCH date in ms)

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

objectEui	string	The object Extended Unique Identifier. Object can be a LnsEquipment or an Endpoint.
type	string	Last event type { ALARM, NOTIFICATION }
name	string	Last event name { NEVER_SEEN, JOINED, JOIN_MIC_ERROR, JOIN_DEV_NONCE_ERROR, UPLINK_OK, FCOUNT_ERROR, MIC_ERROR, APP_NOT_EXIST, QUEUE, NET_ADDR, REQUEST_NOT_EXIST, CLUSTER_NOT_EXIST, MOTE_NOT_EXIST, APP_KEY, TX_TIMEOUT, TX_NO_ACK, TX_ERROR, RX_ERROR, FCOUNT_UPDATE, CNT_NOT_SYNC }
value	string	Last event value
read	boolean	Last event has been read (true)

4.56 LnsLastEventCounterDto

Field	Type	Description
lNsEvent	LnsEventDto	LNS last event
count	integer	Number of LNS last event occurrences which are not marked as read

4.1 LogDto

Field	Type	Description
id	integer	Log identifier
type	string	Value is log

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential

	Page 323 / 349		

logLevel	string	The log level
logMessage	string	The message
date	integer	Timestamp in milliseconds
origin	String	The application which logged the message

4.2 LoraStationDto

Field	Type	Description
id	integer	LoraStation identifier
fleet	FleetDto	Attached fleet
eui	string	Extended Unique Identifier. Value from the 'EUI-64' number space managed by the IEEE
name	string	Name
type	string	Description of the type
ip	string	ip address
port	integer	ip port
connection	boolean	the connection status (null means never connected)
latitude	real	Latitude in decimal degrees
longitude	real	Longitude in decimal degrees
altitude	integer	Altitude in meters
bearer	string	network bearer value { GSM, ETHERNET, WLAN, UNKNOWN }
region	string	Lora station region { AMERICAS_902_928, ASIA_915_928, AUSTRALIA_915_928, CHINA_779_787, EUROPE_433_433, EUROPE_863_870 }
maxTxPower	integer	maximum transmission power (dBm) min = 0, max = 30 dBm, default = 27dBm
allowGPSPosition	boolean	Authorizes the update of the GPS location default = true
networkMaxDelayUp	integer	Duration of the upstream paquet transfer to LNS (ms) min = 0 ms, max = 9999 ms, default = 350 ms
networkMaxDelayDown	integer	Duration of the downstream paquet transfer from LNS (ms) min = 0 ms, max = 9999 ms, default = 350 ms
visibility	string	Lora station visibility

lastEvents	LastEventDto[]	List of last events
lastStatistics	LastStatisticDto[]	List of last statistics

Background grey : fields inherited from EquipmentDto

4.3 LoraStationConfigurationDto

Field	Group	Type	Description
lastSuccessQueryDate		integer	Date of the last success query
fromDate		integer	Start date (EPOCH date in ms)
toDate		integer	End date (EPOCH date in ms)
eui		string	Equipment EUI
hash		string	Configuration hash code
rollbackTmoMn	deviceManagement	integer	
statsPeriod	deviceManagement	integer	
whitelist	deviceManagement	string	
configRadio	lan	string	Radio configuration (JSON)
powerThreshold	lan	integer	
durationThreshold	lan	integer	
sourceAux	time	string	
periodResolution	time	string	{ PR16SEC, PR1MIN, PR17MIN, PR1HOUR, PR9HOUR, PR18HOUR, PR36HOUR }
ntp1	time	string	
ntp2	time	string	
ptpMaster	time	string	{ TRUE, FALSE }
configVpn	vpn	string	VPN configuration (JSON)
wanInterfaceTypes	wan	WanInterfaceTypeDto	
apn	wan	string	
pinCode	wan	string	4 to 8 digits

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

login	wan	string	
password	wan	string	
dhcp	wan	string	{ TRUE, FALSE }
defaultIplp	wan	string	
defaultBroadcast	wan	string	
defaultGateway	wan	string	
ssid	wan	string	
mode	wan	string	{ WEP, WPA }
passwordWlan	wan	string	

4.4 LoraStationModemDto

Field	Type	Description
serialNumber	string	Modem serial number
lanRadioType	string	{ TYPE_169_OR_868, TYPE_LORA_MONO, TYPE_LORA_DUAL, TYPE_LORA_LOC }
location	integer	Position of the modem pn the board
lanRadioHwVersion	string	Hardware version
lanRadioFrontRfHwVersion	string	Font radio frequency version
lanRadioSwVersion	string	Software version
lanRadioAntennaNumber	integer	Number of antenna
lanRadioRfFrontInputPathNumber	integer	Number of input radio path
lanRadioCentralFrequency	integer	Central frequency in MHz
lanRadioRfPathNumber	integer	Number of radio path
lanRadioPathWidth	integer	Width of radio path in KHz
lanRadioMinTxFrequency	integer	Min frequency on tx path
lanRadioMaxTxFrequency	integer	Max frequency on tx path
lanRadioMinRxFrequency	integer	Min frequency on rx path
lanRadioMaxRxFrequency	integer	Max frequency on rx path

4.5 LoraStationModemStatisticDto

Field	Type	Description
date	integer	Statistics date (EPOCH date in ms)
scanData	Map<Long, Map<String, Integer>>	Statistics data
interferers	ModemStatisticInterferDto[]	List of interifers

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

4.6 LoraStationNumericStatisticsDto

Field	Type	Description
eui	string	Lora station EUI
timestamp	integer	Date of the statistic (EPOCH date in ms)
data	Map<String, Double>	Statistic data

4.7 LoraStationStatisticsDto

Field	Group	Type	Description
fleetId		integer	Fleet identifier
instant		integer	The instant of the statistics (format : YYYYMMDDHH)
instantInTimestamp		integer	instant in timestamp format (EPOCH date in ms)
rollTimestamp		integer	roll timestamp (EPOCH date in ms)
nbUplinkMessageSum	uplink	integer	Number of uplink messages
sizeUplinkSum	uplink	integer	size of uplink (byte)
ackrSum	uplink	integer	Number of uplink non acknowledged messages
nbDownlinkMessageSum	downlink	integer	Number of downlink messages
sizeDownlinkSum	downlink	integer	size of downlink (byte)
bootCause		string	Boot cause
abortCrash		integer	Abort crash
abortReboot		integer	Abort reboot
startNumber		integer	Start number
ramMin	ram	integer	Minimum RAM utilization (%)
ramAvg	ram	integer	Average RAM utilization (%)
ramMax	ram	integer	Maximum RAM utilization (%)
ramThreshold	ram	integer	RAM alarm threshold (%)
ramHysteresis	ram	integer	RAM alarm hysteresis
cpuMin	cpu	integer	Minimum CPU utilization (%)
cpuAvg	cpu	integer	Average CPU utilization (%)
cpuMax	cpu	integer	Maximum CPU utilization (%)
cpuThreshold	cpu	integer	CPU alarm threshold (%)
cpuHysteresis	cpu	integer	CPU alarm hysteresis
systemDiskUsed	system	integer	System disk utilization (%)
systemDiskThreshold	system	integer	System disk threshold (%)

systemDiskHysteresis	system	integer	System disk hysteresis
userDiskUsed	user	integer	User disk utilization (%)
userDiskThreshold	user	integer	User disk threshold (%)
userDiskHysteresis	user	integer	User disk hysteresis
extraDiskUsed	extra	integer	Extra disk utilization (%)
extraDiskThreshold	extra	integer	Extra disk threshold (%)
extraDiskHysteresis	extra	integer	Extra disk hysteresis
gsmMinRssi	gsm	integer	Minimum GSM RSSI (db)
gsmAvgRssi	gsm	integer	Average GSM RSSI (db)
gsmMaxRssi	gsm	integer	Maximum GSM RSSI (db)
gsmRssiThreshold	gsm	integer	GSM RSSI alarm threshold (db)
gsmRssiHysteresis	gsm	integer	GSM RSSI alarm hysteresis
gsmServingCell	gsm	string	GSM ser
temperatureMin	temperature	integer	Minimum temperature utilization (%)
temperatureAvg	temperature	integer	Average temperature utilization (%)
temperatureMax	temperature	integer	Maximum temperature utilization (%)
temperatureThreshold	temperature	integer	temperature alarm threshold (%)
temperatureHysteresis	temperature	integer	temperature alarm hysteresis
gpsStatus	gps	string	GPS status
gpsLockRatio	gps	integer	GPS lock ratio
gpsLatitude	gps	real	GPS latitude (decimal degrees)
gpsLongitude	gps	integer	GPS longitude (decimal degrees)
gpsAltitude	gps	integer	GPS altitude (meters)
gpsSatellitesNumber	gps	integer	Number of satellites
doorState	door	string	Door state {OPEN, CLOSED}
doorLastOpen	door	integer	Door last open date (EPOCH date in ms)
doorLastClose	door	integer	Door last closed date (EPOCH date in ms)
supplyPowerSource	supply	string	Power source {MAIN, AUX}
supplyPowerMilliVolts	supply	integer	Power supplly (mv)
restartSum	packetForwarder	integer	Number of packet forwarder restarts during the period
uptimeAvg	packetForwarder	integer	Packet forwarder uptime in ms
modemStats		List<LoraStat ionModemSt atisticsDto>	
loraStats		Erreur ! Source du renvoi introuvable.	The LoRa statistics as calculated by the station.

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

4.8 LoraStationTermStatisticsDto

Field	Type	Description
eui	string	Lora station EUI
timestamp	integer	Date of the statistic (EPOCH date in ms)
fineTimestamp	integer	The Base 64 encoding of the encrypted precise time
fineTimestampStatus	string	timestamp status { NOT_FOUND, NO_KEYS, FAIL_DECRYPT, DECRYPTED }
data	Map<String, Double>	Statistic data

4.9 ModemStatisticInterfererDto

Field	Type	Description
frequencyMin	integer	Interferer minimum frequency (Hz)
frequencyMax	integer	Interferer maximum frequency (Hz)
powerAvg	integer	Interferer average power (dBm)
powerMax	integer	Interferer maximum power (dBm)
dutyCycle	integer	Interferer duty cycle

4.10 MetaDto

Field	Type	Description
name	string	DTO name
fields	List<MetaFieldDto>	List of metaFields

4.11 MetaFieldDto

Field	Type	Description
name	string	Field name
group	string	Group name
type	string	Type {string, integer, real, boolean}
description	string	Description

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 329 / 349	

association	string	The type used in a collection (example List<string>, List<CustomerDto>)
mandatory	boolean	True for a mandatory field (a not null field)
authorized	boolean	True if the field can be provided in the request body
minLength	integer	Minimum length of the field value (example minLength=1 means that the field cannot be empty)
maxLength	integer	Maximum length of the field value
min	object	Minimum field value (example: 10, 20.4)
max	object	Maximum field value
set	object[]	Finite set of possible values for a field example ["A", "B", "C"]
regex	string[]	List of regex to apply to the field
defaultValue	object	Default value (example: 0, 2.1)
read	boolean	Defines the authorization to read the field according to the role
write	boolean	Defines the authorization to write the field according to the role

4.12 MetricsDto

Field	Type	Description
memory	integer	Total system memory in KB
availableMemory	integer	The amount of free memory in KB
systemUptime	integer	The system uptime in milliseconds
applicationUptime	integer	The application context uptime in milliseconds
currentProfile	string	The current Spring profile
userLanguage	string	The user language
userTimeZone	string	The user time zone
logFile	string	The logging path file
applicationConfiguration	Map<String, String>	List of application properties {key, value}

4.13 NumericStatisticDto

Field	Type	Description
min	integer	Minimum range value
max	integer	Maximum range value
value	integer	Statistic value

4.14 PaginatedDto

Field	Type	Description
Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 330 / 349	

page	integer	Page number [1..n]
nbPages	integer	Number of pages
pageSize	integer	The page size
count	integer	The number of elements per page
totalCount	integer	The total number of elements

4.15 ProcessDefinitionDto

Field	Type	Description
Id	String	The unique identifier
category	String	category name which is derived from the tarNamespace attribute in the definitions element
name	String	label used for display purposes
key	String	unique name for all versions this process definitions
description	String	description of this process
version	Number	version of this process definition
resourceName	String	Name of the resource of this process definition
deploymentId	String	The deployment in which this process definition is contained
diagramResourceName	String	The resource name in the deployment of the diagram image (if any)
hasStartFormKey	Bool	Does this process definition has a
isGraphicalNotationDefined	Bool	Does this process definition has a graphical notation defined (such that a diagram can be generated)?
suspended	Bool	Returns true if the process definition is in suspended state
tenantId	String	The tenant identifier of this process definition
engineVersion	String	The engine version for this process definition (5 or 6)
xmlB64	String	The process in XML version in Base64
processVariables	Map	Map of process variables. name - type

4.16 ProgressMonitorDto

Field	Type	Description
status	string	Progress status { IN_PROGRESS, OK, KO }
done	integer	Number of elements treated

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 331 / 349	

total	integer	Total number of elements to treat
error	ErrorDto	The error if status is KO
creationDate	integer	Creation date of the monitor (EPOCH date in ms)
startDate	integer	Start date of the progress monitor (EPOCH date in ms)
endDate	integer	End date of the progress monitor (EPOCH date in ms)
currentDate	integer	Date of the treatment of the current element (EPOCH date in ms)
accessDate	integer	Date of access to the monitor by a user (EPOCH date in ms)
result	object	A representation of the web service result

4.17 RoleDto

Field	Type	Description
id	integer	role identifier
name	string	Role name. Predefined roles names are { READER, USER, ADMIN, SUPER_ADMIN }
roleType	string	Role type { READER, USER, ADMIN, SUPER_ADMIN }
level	integer	Role level { READER: [10,19], USER: [20,29], ADMIN: [30,39], SUPER_ADMIN: [40,49] }

4.18 RxMessageDto

Field	Type	Description
msgId	string	internal identifier
port	integer	frame port number
timestamp	integer	epoch unix

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 332 / 349		

devAddr	string	32 bit device address (non-unique) within the current network
fcntUp	integer	frame counter upstream
fcntDown	integer	frame counter downstream
frequency	real	reception frequency
modulation	string	{ LORA, FSK }
bandwidth	integer	reception bandwidth (kHz)
sf	integer	spreading factor
adr	string	True when adaptative data rate is enabled
codingRate	string	
devEui	string	64 bit end-device id, EUI-64 (unique)
payload	string	message content
encrypted	boolean	if true, message content is encrypted
keySessionId	string	Key session identifier
stations	RxMessageStationsDto[]	List of station RX messages

4.19 RxMessageStationsDto

Field	Type	Description
stationId	integer	LNS equipment identifier
timestamp	integer	RX message date (EPOCH date in ms)
fineTimestamp	integer	The Base 64 encoding of the encrypted precise time
fineTimestampStatus	string	timestamp status { NOT_FOUND, NO_KEYS, FAIL_DECRYPT, DECRYPTED }
rxPath	RxPathDto[]	List of RX paths

4.20 RxPathDto

Field	Type	Description
channel	integer	Channel
radioid	integer	Radio identifier

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 333 / 349		

rssi	real	Received signal strength, in units of dBm.
snr	real	The signal to noise ratio, in units of dB.

4.21 SelectionDto

Field	Type	Description
id	integer	Selection identifier
name	string	Name
type	string	type { ENDPOINT, LORA_STATION }
description	string	Description
items	ItemDto[]	List of ItemDto
dtos	Dto[]	List of Dto 2 types : LoraStationDot, EndpointDto
count	integer	number of dto in dtos list

4.22 TaskDto

Field	Type	Description
id	integer	Task identifier
status	string	Task status { PENDING, OK, KO }
action	string	Task predefined action
callerPath	string	Path of the caller
eui	string	Equipment EUI
creationDate	integer	Creation date of the task (EPOCH date in ms)
sendParameters	string[][]	Sent parameters
receivedParameters	string[][]	Received parameters
criteria	string[][]	Map of criteria for retrieving tasks
message	string	Message for describing the task status
errorCode	integer	Error code
errorMessage	string	Error message

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink	
Internal Use	Kerlink m2m technologies reserved rights	
Confidential		
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD	
	Page 334 / 349	

4.23 TaskMessageDto

Field	Type	Description
id	integer	Task message identifier
message	string	The text of the message
date	integer	Message date (EPOCH date in ms)
step	string	Step description { RECEIVED_FROM_APPLICATION, RECEIVED_FROM_EQUIPMENT, ROUTING_TO_EQUIPMENT, ROUTING_TO_APPLICATION, SEND_TO_EQUIPMENT }
location	string	Location within the step Exemples : Message sending to equipment, RouterService.routeToApplication()
next	boolean	True for executing next step, false otherwise

4.24 TxMessageDto

Field	Type	Description
msgId	string	internal message identifier
timestamp	integer	epoch unix
devEui	string	64 bit end-device id, EUI-64 (unique)
port	integer	Port number
payload	string	message content (base64)
txEvent	string	{ SENT, ACK, NO_ACK, ERROR, TIMEOUT }
txStatus	string	current message status { OK, KO, IN_PROGRESS }
ack	boolean	if true acknowledge is requested
nbRetry	integer	retry number status

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential			
Strict confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
	Page 335 / 349		

maxRetry	integer	max allowed retry
timeToLive	integer	maximum time to live
keySessionId	string	The identifier of the generated session keys NwkSKey and AppSKey
fcntDown	integer	frame counter downstream
historic	TxMessageHistoricDto[]	

4.25 TxMessageHistoricDto

Field	Type	Description
timestamp	integer	epoch unix
txStatus	string	{ SENT, ACK }

4.26 UnsentRxMessageDto

Field	Type	Description
devEui	string	Endpoint identifier
appEui	string	Global application identifier
devAddr	string	Network endpoint identifier
clusterId	integer	Cluster identifier
msgId	integer	Message identifier
fcntUp	integer	frame counter upstream
fcntDown	integer	frame counter downstream
token	real	Arbitrary value set by Gateway
userdata	UnsentRxMessageUserDataDto	User data
motetx	DetailedMoteRXMessageDto	Endpoint RX message details
gwrx	UnsentRxMessageGatewayDto[]	List of gateway Rx

4.27 UnsentRxMessageUserDataDto

Field	Type	Description
fport	integer	port
payload	string	content (base64 or hexa if clusterDto.hexa = true)
maxretry	integer	max allowed retry

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink		
Internal Use	Kerlink m2m technologies reserved rights		
Confidential	Kerlink – 1 rue Jacqueline Auriol – 35235 THORIGNÉ-FOUILLARD		
Strict confidential	Page 336 / 349		

<code>ttl</code>	<code>integer</code>	Time to live
<code>conf</code>	<code>boolean</code>	If true message is confirmed

4.28 UnsentRxMessageGatewayDto

Field	Type	Description
<code>eui</code>	<code>string</code>	Extended Unique Identifier
<code>ant</code>	<code>integer</code>	Identifies the antenna, within the GW card. The value does not identify the antenna within the GW
<code>tmms</code>	<code>integer</code>	Approximate UTC time of receipt of the LoRa frame in the form of the number of milliseconds since the beginning of the first second of 1970
<code>ftime</code>	<code>integer</code>	The precise time of receipt, in units of nanoseconds.
<code>etime</code>	<code>integer</code>	The Base 64 encoding of the encrypted precise time of receipt. The encryption algorithm is AES-128. The un-encrypted value contains 16 octets. The final six contain the time since the most recent second boundary, in big endian ordering and in 5 units of nanoseconds/2 . The remaining ten octets are zero.
<code>time</code>	<code>integer</code>	Approximate UTC time of receipt of the LoRa frame. The precision is one microsecond. The format is ISO 8601 'compact' format
<code>timefromgateway</code>	<code>boolean</code>	True when the accompanying 'time' value is generated by the gateway
<code>chan</code>	<code>integer</code>	Concentrator "IF" channel on which the frame was received
<code>rfch</code>	<code>integer</code>	A decimal integer representing an 8 bit field. The four more significant bits contain the identity of the radio board on which the frame was received. The four less significant bits are unused.
<code>rssic</code>	<code>integer</code>	The measured received signal strength in units of dBm
<code>rssiis</code>	<code>integer</code>	The measured strength of the received LoRa signal in units of dBm . Never used if the "modu" component of containing "rxpk" object does not equal "LoRa".
<code>rssid</code>	<code>integer</code>	Standard deviation of the measured strength of the received LoRa signal in units of dBm (rssis)

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

		during the LoRa frame preamble. Never used if the "modu" component of containing "rxpk" object does not equal "LoRa"
lsnr	integer	The measured received signal to noise ratio in units of dB. Not used when modulation technique is FSK
foff	integer	The offset of the received signal centre frequency from the "freq" value of the containing "rxpk" object. The value is in units of Hertz. A positive value indicates that the measured signal is of higher frequency than the "rxpk"."freq" value
ft2d	integer	The correction that should be applied to the fine timestamp carried in the JSON object "etime". The corrected timestamp is the sum of "ft2d" and the decrypted "etime"
rfsbsb	integer	The ratio of the energy of the full band signal to that of the sum of the sub band signals, expressed as a percentage
rs2s1	integer	The ratio of the entergy of the Sub-band 2 signal to the energy of the Sub-band 1 signal

4.28.1 UserDto

Field	Type	Description
id	integer	identifier
firstName	string	firstname
lastName	string	lastname
login	string	login
password	string	password
email	string	email address
phone	string	phone number
avatar	string	avatar url
expirationDate	integer	expiration date (EPOCH date in ms). Default to null which means no limit
enabled	boolean	enabled means that the user can use the authenticated web services. Default to true
requestMaxRate	integer	maximum number of requests per second
requestMaxRateDuration	integer	duration of maximum number of requests exceeding in seconds

4.29 VersionDto

Field	Type	Description
index	integer	Table index number
description	string	Version number

4.30 WanInterfaceTypeDto

Field	Type	Description
index	Integer	Table index
wanInterfaceType	String	wan interface type { GSM, ETHERNET, LAN }

4.31 WsDto

Field	Type	Description
id	integer	identifier
name	string	web service name
method	string	HTTP method { GET, POST, PUT, DELETE, PATCH }
path	string	web service URI path
role	string	the role required to use the web service { READER, USER, ADMIN, SUPER_ADMIN }
returnType	string	the Dto returned by the web service
scope	string	The scope defines the general access to the web service { PRIVATE, PUBLIC }
since	string	the oss version since the web service exists
workflowGroups	string	list of workflow groups that the web service is eligible for. Values are separated by a comma. Values are in set : { ENDPOINT, STATION }

6. Annex B : Error codes

When an error occurs the response body should contain an ErrorDto object which consists of a code and a message.

```
{  
    "code": "RESOURCE_NOT_FOUND",  
    "message": "Customer '10' not found.",  
    "params": [  
        "Customer",  
        10  
    ]  
}
```

Figure 3 - Example of error sent in the response body

6.1 Error code list

```
# Generic messages
FIELD_INCORRECT = The field ''{0}'' is incorrect. Specification is : {1}.
RESOURCE_ALREADY_EXISTS = {0} ''{1}'' already exists.
RESOURCE_INCORRECT = The resource has a bad syntax. Error details : {0}
RESOURCE_NOT_FOUND = {0} ''{1}'' not found.
CONFIGURATION_INCORRECT = The configuration of ''{0}'' is incorrect.
PARAMETER_INCORRECT = The parameter ''{0}'' is incorrect. Specification is : {1}
PARAMETER_MISSING = The parameter ''{0}'' is missing.
FIELD_INCORRECT = The field ''{0}'' is incorrect. Specification is : {1}
MAPPING_INCORRECT = The mapping from resource ''{0}'' to ''{1}'' has failed.
SECURITY_FORBIDDEN = User is forbidden to access to the web service. Check his roles.
SECURITY_UNAUTHORIZED = An authorization is required. Bad user or/and password.
URI_INCORRECT = The URI ''{0}'' is incorrect. Specification : {1}

# Specific messages
CUSTOMER_MAXIMUM_EQUIPMENTS = The value of the field ''maxEquipments'' ({0}) cannot be less than the actual number of equipments ({1}).
CUSTOMER_MAXIMUM_EQUIPMENTS_REACHED = The customer ''{0}'' has reached its maximum number of equipments ({1}).
CUSTOMER_MAXIMUM_ENDPOINTS = The value of the field ''maxEndpoints'' ({0}) cannot be less than the actual number of endpoints ({1}).
CUSTOMER_MAXIMUM_ENDPOINTS_REACHED = The customer ''{0}'' has reached its maximum number of endpoints ({1}).
CUSTOMER_MAXIMUM_USERS = The value of the field ''maxUsers'' ({0}) cannot be less than the actual number of users ({1}).
CUSTOMER_MAXIMUM_USERS_REACHED = The customer ''{0}'' has reached its maximum number of users ({1}).
FILE_TRANSFER_FAILED = Failed to transfer the file. Error message : {0}
RESOURCE_INCORRECT_PROVIDED_FIELDS = The resource is incorrect. {0}. Specification is : {1}
SECURITY_BAD_CREDENTIALS = Unknown user. Bad login or/and password.
SECURITY_CUSTOMER_FLEET = The fleet ''{0}'' does not belong to the customer ''{1}''.
```

Classification	This document is the strict property of Kerlink and shall not be either copied nor sent without express written authorization of Kerlink

```

SECURITY_CUSTOMER_USER = The user ''{0}'' does not belong to the customer ''{1}''.
SECURITY_DELETE_CUSTOMER = You cannot delete your own customer.
SECURITY_DELETE_ROLE = You cannot delete the role ''{0}''.
SECURITY_FLEET_EQUIPMENT = The equipment ''{0}'' does not belong to the fleet ''{1}''.
SECURITY_EQUIPMENT_LAST_EVENT = The lastEvent ''{0}'' does not belong to the equipment ''{1}''.
SECURITY_FORBIDDEN_CUSTOMER = The user ''{0}'' cannot manage the customer ''{1}''.
SECURITY_FORBIDDEN_FIELD = The field ''{0}'' cannot be managed with this role or this user.
SECURITY_FORBIDDEN_ROLE = The user ''{0}'' cannot have the role ''{1}''.
SECURITY_FORBIDDEN_TASK = The user ''{0}'' cannot manage the task because it belongs to another customer.
SECURITY_BUILD_TOKEN = The token built has failed.
SECURITY_UPDATE_ROLE = You cannot update the role ''{0}''.
SECURITY_USER_ROLE = The user ''{0}'' has not the role ''{1}''.
SECURITY_USER_EXPIRED = The user ''{0}'' is expired since {1}.
SECURITY_USER_DISABLED = The user ''{0}'' is disabled.
SERVER_ERROR = Server error, details : {0}
SERVICE_UNAVAILABLE = Service unavailable ''{0}''.
TASK_KO = The task has failed, see error message for more details.
TASK_NOT_OK = The task status must be 'OK' for retrieving the result.
TASK_OK = The task has successfully been processed.
TASK_PENDING = The task is currently being processed.

CSV_INCORRECT = CSV is incorrect.
CSV_ROW_INCORRECT = CSV row {0} is incorrect.
CSV_ROW_IGNORED = CSV row {0} is ignored.
UNAUTHORIZED_FIELD = Field ''{0}'' is not authorized.
UNAUTHORIZED_FIELDS = Fields {0} are not authorized. Authorized fields are {1}.
MISSING_AUTHORIZED_FIELDS = Missing authorized fields {0}.
MISSING_AUTHORIZED_AND_MANDATORY_FIELDS = Missing authorized and mandatory fields {0}. Authorized and mandatory fields are {1}.
EMPTY_FILE = The file ''{0}'' cannot be empty.
FIELD_INCORRECT = The field ''{0}'' is incorrect.
QUERY_PARAMETER_INCORRECT = The query parameter ''{0}'' is incorrect.
BODY_PARAMETER_INCORRECT = The body parameter ''{0}'' is incorrect.

```

MIN_VALUE = The minimum value is {0}.
MAX_VALUE = The maximum value is {0}.
MIN_LENGTH = The minimum length is {0}.
MAX_LENGTH = The maximum length is {0}.
VALUE_IN_INTERVAL = The value must belong to the interval [{0}..{1}].
VALUE_IN_SET = The value must belong to the set {0}.
VALUE_REGEX = The value must match the pattern {0}.
UNKNOWN_FIELD = The field '{0}' is unknown.
MANDATORY_FIELD = The field '{0}' must be defined.
UNICITY = The field '{0}' must be unique.
LNS_SERVER_ERROR = The LNS server has encountered a problem. Message is : {0}
FLEET_NOT_ATTACHED = The fleet '{0}' is not attached to any customer.
CLUSTER_NOT_ATTACHED = The cluster '{0}' is not attached to any customer.
ACCESS_ERROR_FILE = Error while accessing to the file '{0}'.
ERROR_ON_FILE = Error on file '{0}'.
PROGRESS_MONITOR_IN_PROGRESS = A progress monitoring is already in use. URI is '{0}'.
FAILED_TO_CREATE_RESOURCE = Failed to create the resource {0}.
EXPIRED_DATE = The date has expired.
FIELD_GREATER_THAN_FIELD = The field '{0}' must be greater than the field '{1}'.

```

6.1.1 LNS Error code list

```

001 = parameter {0} cannot be null or empty
002 = {0} entity with id {1} not found
003 = {0} is not a valid format for a {1}
004 = Role {0} is not authorized to perform this action
005 = Unexpected error, please contact your administrator
006 = Invalid token
007 = Token has expired
008 = Error JOSE on authentication

6.2 Exchanges samples

Two examples of request/response. First web example one does not require any authentication, and the second needs one.

6.2.1 login

```
curl -v -H 'Content-Type: application/vnd.kerlink.iot-v1+json' -X
POST -d '{"login":"<login>","password":"<pwd>"}'
'http://<host>/oss/application/login'
```

replace :

- <host> by your server domain
- <login> by your login
- <pwd> by your password associated to your login

6.2.1.1 Request

```
POST /oss/application/login HTTP/1.1
User-Agent: curl/7.35.0
Host:wanesy.fr
Accept: */*
Content-Type: application/vnd.kerlink.iot-v1+json
Content-Length: 41

upload completely sent off: 41 out of 41 bytes
HTTP/1.1 201
Server nginx/1.11.10 is not blacklisted
Server: nginx/1.11.10
Date: Fri, 07 Jul 2017 08:09:44 GMT
